A NOTE TO USERS

Employment and Payroll Statistics:

The May edition of the Review provided users with the latest revisions on employment and payroll statistics according to the 1960 Standard Industrial Classification, with all indexes revised to a 1961=100 time base. Only unadjusted data were presented at that time in Tables 28 to 35 inclusive.

With this issue, the seasonally adjusted series are introduced in Table 28 and Page S-3 for employment indexes by industrial divisions and in Table 29, by province. In addition, Page S-4 of this issue provides seasonally adjusted data on average hourly earnings and weekly hours in manufacturing.

The historical record for the above adjusted series will be available in the D.B.S. February 1966 publications entitled "Employment and Weekly Wages and Salaries" (Catalogue No. 72-002) and Man-Hours and Hourly Earnings (Catalogue No. 72-003).

Annual Supplement to the Review:

The fifth issue of the Annual Supplement to the Review (1965 edition) will appear in print shortly and will carry the latest revised figures and the complete historical record of all series appearing in the S- pages.

Annual Subscription: \$5.00 — Single copy: 50c.

This review and other publications of the Dominion Bureau of Statistics, including a free annotated catalogue of current publications, may be ordered from the Information and Public Relations Division, Dominion Bureau of Statistics, Ottawa, Ontario, and remittances made payable to the Receiver General of Canada.

2204-501

NATIONAL ACCOUNTS, INCOME AND EXPENDITURE

FIRST QUARTER, 1966

Introductory Review

Gross National Product rose to a level of \$55.7 billion in the first quarter, an increase of 3.6 per cent from the preceding quarter. Prices again advanced by approximately 1 per cent reducing the gain to 2.5 per cent in real terms. This strong advance was partly attributable to irregular factors in the external sector.

Exports of goods and services showed the strongest advance of any quarter in the five-year expansion. Most of this irregular increase was in merchandise exports which were unusually high for this season. This was supplemented by sharp advances in travel, freight and shipping and interest and dividend receipts. In addition imports advanced by only a small amount because of the Ontario trucking strike and other factors. The net effect of these external transactions was to narrow the deficit on current account, (on a National Accounts basis), from \$1.5 billion in the fourth quarter to \$.8 billion in the first quarter.

Fixed capital formation increased by less than 3 per cent between the fourth and first quarters, but this summary figure obscures some divergent movements among the components. Housing showed only a fractional increase and investment in machinery and equipment declined slightly. On the other hand, investment in plant continued to rise sharply. As in the last quarter, business accumulated stocks, thus adding to the demands on production, but the rate of accumulation was somewhat lower than in the preceding period.

Personal spending in the current quarter continued to show strength, advancing by 2 per cent from the previous quarter.

Expenditure on goods and services by all levels of government rose by nearly 4 per cent; the increase of 5 per cent at the federal level being almost

entirely attributable to special increases in military pay and allowances, while provincial and municipal expenditures rose by 3 per cent. With revenues rising more than expenditures, the surplus for all levels combined reached a level of three quarters of a billion dollars, the highest since 1951. Most of this increase resulted from receipts from the Canada and Quebec pension plans.

The salient developments on the income side of the Accounts in the quarter were a marked gain in labour income, reflecting not only the buoyancy of the labour market but also sharp increases in supplementary labour income, following the introduction of the Canada and Quebec pension plans at the beginning of the year. There was a modest increase in corporate profits after a slight decline in the preceding period. Accrued net income of farm operators from farm production was estimated to have been somewhat higher, with larger receipts from livestock production exceeding the assumed drop in income from grain production if the 1966 crop is average rather than unusually large as it was last year. A decidedly large gain in military pay and allowances was the result of the payment of a bonus for re-engagement. The quarterly charge in personal income in relation to Gross National Product and in the composition of personal income are of considerable interest and are described in some detail under a separate heading.

Price Movements

As previously mentioned, Gross National Product rose by 2½ per cent in constant dollars, while the price component of GNP increased by a little over 1 per cent.

The implicit price index of consumer expenditure rose by about 1 per cent on a seasonally adjusted basis. This increase is shown in some detail in the following table.

Personal Expenditure
Per Cent Change in Implicit Price Indexes, Seasonally Adjusted

	4th Q 1965 to 1st Q 1966	1st Q 1965 to 1st Q 1966
Services	1.0	3.3
Durable goods	-.5	- 1.0
Non-durables (excluding food)6	1.8
Non-food commodities3	.9
Food	3.1	7.5
Totals	1.1	3.1

ALL DATA SEASONALLY ADJUSTED, AT ANNUAL RATES

It is apparent that much of the rise in prices in both the current quarter and over the past twelve months has occurred in food prices. Within food the increase is largely attributable to meat. Non-durable

goods price increases were noted in items such as clothing. The following table summarizes selected food price movements in the consumer price index based on data unadjusted for seasonality.

Consumer Price Index
Percentage Change for Selected Food Prices

Item	4th Q 1965 to 1st Q 1966	1st Q 1965 to 1st Q 1966
Beef	6.8	14.0
Pork	9.5	33.7
Other meats	6.6	11.3
Fish	3.0	10.8
Poultry	5.5	8.7
Total meat, fish and poultry	7.1	17.7

The substantial rise in meat prices, especially beef and pork, was largely the result of supply shortages in the United States.

The implicit price index for business gross fixed capital rose by 0.9 per cent as compared with 1.2 per cent for the fourth quarter 1965. Machinery and equipment prices showed a rise of 0.6 per cent for the second consecutive quarter. However, the bulk of the rise in the over-all index was due to sharp cost increases in the construction industry—1.6 per cent for new residential construction and 0.9 per cent for non-residential construction. Both wage

rates and cost of materials moved upward, the former by 2.1 per cent and the latter by 0.8 per cent.

Discounting weighting shifts, prices of merchandise exports rose by 1 per cent. However, this rise concealed fairly sharp compensating movements within constituent groups. Export prices of live animals rose 10.2 per cent; of meats and preparations 6.2 per cent; of wheat 3.1 per cent; and of copper 12.5 per cent, reflecting supply conditions in world markets. There were significant declines in the export prices of lumber, wood pulp and certain metals.

The Demand Components

Consumer expenditure on goods and services advanced about 2 per cent to reach a level of \$34.0 billion at seasonally adjusted annual rates. With prices increasing by about 1 per cent, there was an equivalent rise in real terms. Durable goods set the pace with a 5 per cent gain after showing a decline of 1 per cent in the previous quarter. Non-durable goods and services registered smaller gains of 1 and 2 per cent respectively.

Within the durable goods group, the pace was set by home furnishings, furniture and appliances which taken together showed a gain of about 7 per cent, the largest increase since the beginning of the current expansion. Purchases of new cars declined fractionally as did personal purchases of used cars. However trade-ins, which are deducted from purchases of new and used cars, declined substantially, with the result that the net expenditures on new and used cars increased by close to 2 per cent.

During the first quarter of 1966 spending on most types of services increased. Expenditures on shelter and on household operations expanded by about 2½ per cent, a higher growth rate than at any time during the previous year. Expenditures on medical care, purchased transportation, and personal care were up between 1½ and 2 per cent. User operated transportation was off about 1½ per cent from its level in the previous quarter.

Most of the components contributed to the slightly more than 1 per cent rise in non-durable goods. In a period of rising prices outlays on food rose by 2 per cent. Purchases of alcoholic beverages and tobacco also increased, the latter by almost 6 per cent following a drop in the fourth quarter. Outlays on clothing continued the quarterly advances evident from the third quarter of 1962, rising by 2½ per cent in the most recent quarter. The strength exhibited by these commodities was dampened by a

1½ per cent decline in the purchases of fuel for home heating, while expenditures on gas, oil and grease were unchanged from the previous quarter.

Turning to capital formation, outlays for housing at \$2.1 billion were practically unchanged from the previous quarter. There may be some under-estimation in this figure as it is based partly on completions. The deadline under the Winter House-Building Incentive Program for single and small multiple dwelling structures was stretched from March 31 to April 15. This has caused a shift from March to April in the number of completions which may not represent a corresponding shift in the value of construction which took place.

The value of new non-residential construction totalled \$4.6 billion in the first quarter, up 8 per cent from the fourth. Strong employment increases reported in both building and engineering construc-

tion, together with some increases in both labour and material input prices, raised the estimated value of work put in place.

Outlays on new machinery and equipment dropped 1 per cent to a level of \$4.8 billion in the first quarter. The drop was centered in spending on farm and non-farm machinery and equipment, partly reflecting less buoyant imports, which more than offset a sharp rise in outlays for commercial and passenger vehicles for business use.

Non-farm business inventories continued to increase but at a slightly diminished rate; allowing for seasonal variation, stocks were accumulated at an annual rate of \$644 million in the first quarter. While manufacturing and retail trade contributed equally to this stock build-up, wholesale trade showed a depletion. The following table shows the value of the physical change in non-farm business inventories in the first and previous quarter.

Change in Non-farm Business Inventories
Seasonally adjusted, annual rates

	4th Q 1965	1st Q 1966
	millions of dollars	
Manufacturing	488	320
Durables	476	396
Non-durables	12	- 76
Wholesale	72	- 104
Retail	108	324
"Other" industries	28	104
Grand totals	696	644

Manufacturing stocks, at the total level, continued to increase but at a substantially reduced rate when compared with the previous quarter. This reduction was due to the slow-down in the addition to the stocks of durables and to the depletion in the stocks of non-durables. Within durables, all manufacturers increased their stock except those of primary metal, machinery and metal fabricating. Within non-durables, the accumulation of stock of the food and rubber industries was to a large extent offset by depletions in the leather, textiles and particularly the paper industries. Additions to stocks were evident, at every stage of manufacture, with the stocks of finished products recording the highest rate. With new orders increasing by more than shipments, the quarter ended with an increase in the backlog of unfilled orders. The stock-to-shipments ratio fell below the average ratio of the present economic expansion.

Wholesale inventories were depleted as both durable and non-durable trades, at the total level,

drew down their stocks. The stock-to-sales ratio increased slightly. Retail inventories increased faster than in the previous quarter. The small increment in the stocks of motor vehicle dealers in the first quarter, in part reflected the exceptionally high level of motor vehicle sales in the month of March, a sales level that may have been influenced by purchases made in anticipation of the increased sales tax in the province of Ontario. Data for April indicated that stocks subsequently rose.

The deficit in Canada's external account on a National Accounts basis moved from a seasonally adjusted annual rate of \$1,504 million in the fourth quarter to \$796 million in the first. The change of \$708 million resulted from a turn-round of \$584 million from deficit to surplus in merchandise trade augmenting an improvement by \$124 million in non-merchandise trade.

Exports and Imports of Goods and Services
Seasonally adjusted at annual rates in millions of dollars

	Goods			Services			Current balance
	Exports	Imports	Net	Exports	Imports	Net	
1965 — 1st Q	8,268	8,120	148	2,356	3,468	- 1,112	- 964
2nd Q	8,552	8,312	240	2,420	3,680	- 1,260	- 1,020
3rd Q	8,812	8,652	160	2,504	3,740	- 1,236	- 1,076
4th Q	9,316	9,460	- 144	2,396	3,756	- 1,360	- 1,504
1966 — 1st Q	10,012	9,572	440	2,600	3,836	- 1,236	- 796
4th Q 1965 to 1st Q 1966 % change	7.5	1.2		8.5	2.1		

Discounting for normal seasonality, export gains were made in wheat clearances, aluminum, copper, iron ore and scrap iron, asbestos, newsprint, motor vehicles and non-farm machinery. But exports of motor vehicles and parts have recently risen sharply and the new eventual seasonal patterns of these movements have not yet been established.

Declines were recorded in fish, lumber and wood pulp, nickel and zinc, natural gas, crude petroleum,

fertilizers and farm machinery. Data are not yet available to identify import commodity changes. The Ontario trucking strike in the first quarter was a significant factor in retarding some imports.

The improvement in service transactions can be ascribed mainly to changes in the interest and dividend and the tourist and travel accounts.

The Income Components

Seasonally adjusted wages, salaries, and supplementary labour income had a record increase of 4.2 per cent in the first quarter.¹ The supplementary labour income component, which includes employer contributions under pension plans, rose sharply this quarter because of the introduction of the Canada and Quebec pension plans. Total wages and salaries in the first quarter advanced 3.6 per cent from the previous quarter. This disparity in rates of increase is the result of the introduction of the Canada and Quebec pension plans through which employer contributions raised supplementary labour income payments to a new high level. The gain in total wages and salaries was about equally shared by higher average earnings and an increase in the numbers of paid workers.

The goods-producing industries advanced 4 per cent. Wages and salaries in both the primary industry group and in manufacturing rose about 3½ per cent in the first quarter.

¹ Estimates of labour income in the National Accounts are usually based on complete data for the quarter. However, on this occasion, because of implementation of the new standard industrial classification, together with methodological changes affecting the underlying employment data, it was necessary to make the estimates on the basis of figures for the first two months of the year only.

Seasonally adjusted wages and salaries in the service-producing industries advanced more than 3 per cent in the quarter. The effect of retroactive wage payments to federal government employees was almost completely offset by industrial disputes in transportation and in community services. The gain of over 5 per cent in government non-military wages and salaries reflects the retroactive wage payments, while the smaller increase of 1½ per cent in the transportation, communication and other utilities group reflects industrial disputes in the Ontario trucking industry. Advances of over 3 per cent were recorded in the finance and service industries and wages and salaries in trade increased almost 3½ per cent in the first quarter.

Corporation profits (before taxes and before dividends paid to non-residents) rose in the first quarter to a seasonally adjusted annual rate of \$5.5 billion, an advance of about 3 per cent over the previous quarter.

Total profits of the manufacturing group increased 10 per cent or \$236 million at annual rates. Considerable strength was displayed by the wood, chemical and metals industries, advancing 49, 16 and 14 per cent respectively. In absolute terms these advances amounted to \$68, \$36 and \$108 million. Further increases were recorded by petroleum and

coal, 23 per cent, and food and beverages, 8 per cent. Profits in the paper industry declined for the fifth consecutive quarter; first quarter profits were down \$48 million, 24 per cent from the previous quarter.

Other industries advancing vigorously were wholesale trade which was up 16 per cent, and services which were up 37 per cent. Mining profits remained unchanged. Profits fell in transportation, storage and communication by \$144 million, in finance by \$28 million, and in other non-manufacturing by \$44 million.

Rent, interest and miscellaneous investment income declined by one per cent over the fourth quarter of last year.

Accrued net income of farm operators from farm production increased by almost 7 per cent in the first quarter from the fourth quarter rate. The strength in farm net income came mainly from much higher livestock production in large part a reflection of sharply rising livestock prices. Income from grain production is estimated to have declined during the quarter as the value of the 1966 crop, based on acreage intentions and ten-year average yields, would be 10 per cent lower than the value of the 1965 crop.

Net income received by farm operators increased by over 16 per cent to a level of \$1,992 million in the quarter. This very sharp increase was due to large payments made by the Canadian Wheat Board.

Net income of unincorporated business, seasonally adjusted at annual rates, showed little change in the first quarter of 1966; the changes in the individual industries were small and largely offsetting.

The Personal Sector

To summarize developments in the personal sector, the 3.3 per cent increase in personal income in the first quarter was significantly lower than the 3.6 per cent increase in Gross National Product. The inauguration of the Canada and Quebec pension plans at the beginning of the year raised the outlays in respect of employer and employee contributions to social insurance and government pension funds (which are deducted from personal income) to approximately \$1.5 billion, that is more than \$500 million higher than in the previous quarter. These supplementary payments explain in part the relatively large increase in total labour income of 4.2 per cent when wages and salaries were up only 3.6 per cent. Other changes in the composition of personal income may be noted. The effect on farm income of higher receipts from livestock production has already been referred to. In addition, large payments were made to farmers by the Wheat Board. In this situation net income received by farm operators rose 16½ per cent in the quarter. Military pay and allowances rose

more than 20 per cent, largely as a result of the bonus given to members of the Armed Services who re-engaged for a specified period of years.

Personal disposable income rose fractionally less than personal income, partly as a result of higher income tax payments. With personal spending rising 2 per cent as against a gain of 3.2 per cent in income available for spending, the quarterly rate of personal saving rose sharply. The large payment to farmers by the Wheat Board is undoubtedly one of the important factors in this development.

The Government Sector

Seasonally adjusted at annual rates, total revenues of all governments combined, excluding inter-governmental transfers, rose by almost 4 per cent in the first quarter to a rate of \$17,824 million. Most of the increase was the result of employer and employee contributions to the Canada and Quebec pension plans which began operations the 1st January 1966. Other revenue components showed partially offsetting movements. Revenue from direct taxes remained virtually flat as the gain in personal direct taxes was almost offset by a decline in corporation direct taxes. Revenue from indirect taxes rose by about 3 per cent, the largest gain occurring in municipal real property taxes. Investment income declined by 4 per cent from an irregularly high fourth quarter rate.

Total expenditures of all governments combined increased by almost 2 per cent to a rate of \$17,076 million. Expenditures on goods and services experienced the largest absolute gain. At the federal level, defence outlays rose sharply largely due to the re-engagement bonuses received by service personnel. Non-defence outlays were almost unchanged as increases in salaries and wages and payments out of the International Assistance Fund were offset by declines in most of the other components.

Transfer payment to persons rose by \$200 million during the quarter. Old age security payments, reflecting the lowering of the age limit, effective at the beginning of the year, showed the largest increase.

With total government revenues rising more sharply than expenditures, the government surplus, on a National Accounts basis, almost doubled from a rate of \$400 million in the fourth quarter to a rate of \$748 million in the first quarter, the highest since 1951; much of this improvement in the surplus position was caused by the employer and employee contributions to the Canada and Quebec pension plans.

Production by Industry

Seasonally adjusted Real Domestic Product (at factor cost), less agriculture, for the first quarter of 1966 was about 2 per cent higher than in the preceding quarter and 38 per cent above its first quarter, 1961, cyclical low.

Manufacturing was the largest single contributor to the first quarter gain in non-agricultural real output, followed by trade and construction. Jointly these industry groups accounted for almost 60 per cent of the aggregate increase. Most of the other major industry groupings also showed advances in output from their fourth quarter levels, the exceptions being public administration and defence and fishing and trapping.

Manufacturing advanced by 2 per cent in the first quarter, with the non-durable manufacturing component accounting for close to 60 per cent of this gain. Within non-durables, which increased by 2.2 per cent, most major groups (except clothing and leather products) showed gains from the fourth quarter. The largest contributor was paper products (up by 6½ per cent), which accounted for nearly half of the total increase in non-durables. Chemicals and the foods and beverages group contributed another 27 per cent of the gain in non-durable manufacturing. Within durable manufacturing, which was up by 1.9 per cent, most of the increase came from the 3.7 per cent gain in iron and steel products and the 1.8 per cent advance in the output of transportation equipment. A strong increase of 4.6 per cent was also shown by the non-metallic mineral products group. The only major industry group to show a decline in the first quarter was wood products, which declined by 2.7 per cent, largely as a result of a drop in the output of sawmills.

The next largest contribution to the first quarter gain in non-agricultural real output came from trade, which was up by 1.7 per cent, construction, up by 3.1 per cent, and finance, insurance and real estate and electric power and gas utilities, which increased by 1.9 and 4.4 per cent, respectively. Within trade, the

retail trade component showed a gain of 3.5 per cent, while wholesale trade declined moderately. Department stores, furniture and appliance stores, lumber and building material dealers, farm implement dealers and farm feed stores were among the retail trades to show the largest gains. Sales of motor vehicle dealers showed little change from the levels achieved in the previous quarter, although sales for the month of March were quite high. Among the components of wholesale trade to show strong gains in the first quarter were farm machinery, construction material and supply dealers, hardware dealers, wholesalers of meat and dairy products and clothing products. Sales of commercial, institutional and service equipment and industrial and transportation equipment and supplies also increased sharply. These gains, however, were more than offset by declines in many of the other components of wholesale trade.

First quarter gains among other major industry groupings ranged from about 1 to 7 per cent. Transportation, storage and communication showed an increase of 1.3 per cent, with most of the gain coming from the transportation industries. Within transportation, which advanced by 1.8 per cent, the strong gains in railway and water transport were considerably dampened by the decline in the output of the strike-affected trucking industry. Mining increased by 2.2 per cent in the first quarter, largely as a result of the 3 per cent advance in metal mining. The community, recreation, business and personal services group advanced by 1.2 per cent, with the business service component accounting for most of this gain. Electric power and gas utilities and forestry increased by about 4 and 7 per cent respectively.

THE CANADIAN LABOUR FORCE¹

The number of persons in the Canadian labour force averaged 7,141,000 in 1965, an increase of 2,312,000 or 47.9 per cent from 1946. The male labour force at 5,065,000 was 35.2 per cent and the female labour force at 2,076,000 was 91.9 per cent larger than in 1946. In 1965, the proportion of women in the

Canadian labour force was 29.1 per cent as compared with 22.4 per cent in 1946. Although women comprised only about 25 per cent of the total labour force, on the average, they accounted for 43 per cent of the increase between 1946 and 1965.

One of the most striking developments of the post-war period has been the rapid decline in the agricultural labour force. Between 1946 and 1965 the number of persons engaged in agriculture dropped by almost 50 per cent from 1,190,000 to 602,000. Of the total decrease, men accounted for 505,000 and women 85,000. The relative decrease was greater for women, 54 per cent, than for men, 49 per cent.

During the same period, the non-agricultural labour force increased by 80 per cent from 3,638,000 to 6,540,000. For men the increase was 1,823,000 or 67 per cent and for women 1,078,000 or 116 per cent.

As a result of these opposite movements, in agriculture and non-agriculture, the proportion of the total labour force engaged in agriculture was greatly reduced. In 1946, one out of every four persons in the labour force was in agriculture, whereas in 1965 the proportion was one in twelve. Similarly, some 28

per cent of the male labour force and 15 per cent of the female labour force were in agriculture in 1946 as compared with 10 per cent and 13 per cent, respectively, in 1965.

The agricultural labour force was smaller in 1965 than in 1946 in all regions both relatively and in absolute terms. The Prairies, Ontario and Quebec together accounted for almost ninety per cent of the total decline. In the Prairie region, almost one-half of the total labour force was in agriculture at the beginning of the period as compared with 22 per cent in 1965. For the Atlantic region, Ontario and Quebec, the proportions were reduced from about one in five to about one in seventeen. In British Columbia, the agricultural labour force has always been a small proportion of the total.

¹ Newfoundland came into the labour force survey in October 1949 and therefore is excluded from the 1946 totals.

The Labour Force by Region¹

Annual averages

	1965		1946	
	Number	Per cent distribution	Number	Per cent distribution
	'000		'000	
Canada	7,141	100.0	4,829	100.0
Atlantic	611	8.6	415	8.6
Quebec	2,022	28.3	1,337	27.7
Ontario	2,614	36.6	1,702	35.2
Prairies	1,228	17.2	969	20.1
British Columbia	666	9.3	407	8.4

¹ Components may not add to totals due to rounding.

The Canadian population of working age rose faster than the labour force between 1946 and 1955. Consequently, the participation rate, that is, the labour force expressed as a percentage of the population, declined from 55.0 per cent in 1946 to 52.9 per cent in 1955. Between 1956 and 1965 the participation rate fluctuated narrowly between 53.5 per cent and 54.4 per cent.

All regions contributed to the growth of the Canadian labour force between 1946 and 1965, some to a greater degree than others. Percentage gains ranged between 26.7 for the Prairie region and 63.6 for British Columbia.

The proportion of the total labour force was the same in 1965 as in 1946 for the Atlantic region,

somewhat lower for the Prairie region and slightly to moderately higher for the other regions. Ontario and Quebec together continue to account for the bulk of the total labour force, their combined share approaching two-thirds.

Men in the Canadian Labour Force

Between 1946 and 1965, the number of men in the labour force increased by 1,319,000. During the same period, however, the male population of working age grew by 2,105,000, resulting in a reduced participation rate for men. The decline in the male participation rate from 85.1 per cent in 1946 to 77.9 per cent in 1965 was almost uninterrupted and was due to the reduced labour force attachment of younger and older men.

LABOUR FORCE PARTICIPATION RATES FOR MEN BY AGE GROUP
1946-1965

The very sharp reduction in the participation rate of young men 14-19 years of age from 60.5 per cent in 1946 to 38.7 in 1965 is due in part to the fact that boys are staying in school longer. In 1953, the first year for which data are available, the percentage of young men 14-19 years of age going to school was 40 per cent; in 1965 it was 52 per cent.

The participation rate for young men 20-24 years of age rose from 88.9 per cent in 1946 to 93.4 per cent in 1951. Since then the rate has dropped consistently to 87.6 in 1965. It is interesting to note that full-time male university-grade enrolment was some 49,600 in 1951-52 but approximately 140,900 in 1965-66.

A drastic reduction also occurred in the participation of men 65 years of age and over which dropped from 47.5 per cent in 1946 to 26.3 per cent in 1965. A factor influencing this decline has been the increase in the number of industrial pension plans.

The declining labour force participation of younger and older men has not changed the age distribution of the male labour force appreciably.

The proportion of the total labour force in 1946 was 10.0 per cent for those 14-19 years of age, 11.6 per cent for the group 20-24 years of age and 5.5 per cent for men 65 years of age and over. In 1965 the proportions were 8.3, 11.4 and 3.5, respectively. The proportion of men 25-64 years of age was 72.9 per cent in 1946 and 76.8 per cent in 1965.

There are wide differences in labour force participation of men among regions, rates in 1965 ranging between 70.6 per cent in the Atlantic region and 80.0 in Ontario.

The pattern of labour force participation of younger and older men is very much the same in the regions as outlined above for Canada. In all regions, there was a sharp decline in the participation rate of men 14-19 years of age and 65 years of age and over.

Similarly, in all regions, rates for men 20-24 years of age rose between 1946 and 1951 declining consistently thereafter.

Participation Rates for Men, Selected Age Groups, by Region

Annual averages

Age group and year	Canada	Atlantic	Quebec	Ontario	Prairies	British Columbia
14-19:						
1965	38.7	32.3	36.9	38.6	46.7	40.0

Women in the Canadian Labour Force

Between 1946 and 1965, an interesting feature of the post-war period has been the marked increase in the number of women in the Canadian labour force. In the three years immediately following the war, the number of women in the labour force declined slightly. Thereafter, the female labour force began to grow at an increasing rate, particularly from 1953. The average annual rate of increase in the labour force between 1953 and 1965 was 4.6 per cent for women as compared to 1.5 per cent for men. In a total labour force averaging 7,141,000 in 1965 there were 2,076,000 women and of these 1,073,000 were married.

The increase in the female work force during this period consisted largely of women who either re-entered or remained in the labour force after marriage. While only 12.1 per cent of all married women were in the labour force in 1953, by 1965 their participation rate had reached 25.2 per cent. By contrast, the rate for single women declined from 53.4 per cent to 48.7 per cent during the same period, and there are now more married than single women in the labour force. In 1965 the proportions were 51.7 per cent married, 38.9 per cent single and 9.4 per cent "other" which includes women who were widowed, divorced or legally separated.

Women in the Labour Force
Annual averages

Age group	1965		1946	
	Number	Percentage distribution	Number	Percentage distribution
	'000		'000	
All ages	2,076	100.0	1,082	100.0
14-19	318	15.3	237	21.9
20-24	357	17.2	260	24.0
25-44	793	38.2	401	37.1
45-64	563	27.1	163	15.1
65 and over	45	2.2	21	1.9

The growing participation of married women in the labour market has made a significant alteration in the age distribution of the female labour force. In 1946, women aged 25-64 constituted just over one half of the female labour force. By 1965, the proportion in this age group had grown to almost two-thirds.

These trends are also reflected in the participation rates of different age groups (i.e., the number of women in the labour force as a percentage of all women in the same age group). The change in participation rates over the period 1946 to 1965 is shown below.

**LABOUR FORCE PARTICIPATION RATES FOR WOMEN BY AGE GROUP
1946-1965**

Since 1946 the labour force participation rate for women 45-64 years of age has more than doubled, and the rate for the group 25-44 years of age increased substantially from 23.2 per cent to 32.6 per cent.

For the 20-24 age group, the participation rate dropped sharply from 48 per cent at the beginning of the period but then partially recovered, levelling off at about 47 per cent until 1959. Since then the rate has been rising and is now higher than in 1946. The rate for those 14-19 years of age on the other hand, did not recover following an initial sharp decline but followed an irregular downward course. This reduction in labour force activity by younger women reflects the greater stress that is being placed on the importance of education. In 1953, the proportion of young women 14-19 years of age going to school was 40.2 per cent, but in 1965 it was 51.5 per cent.

Labour force attachment of women 65 years of age and over has been small and their rate of participation has fluctuated narrowly between 3.6 per cent and 6.3 per cent.

There are wide regional variations in labour force participation rates for women. Rates for all ages by region are as follows: Atlantic 26.0 per cent, Quebec 29.4 per cent, Ontario 34.1 per cent, Prairies 32.0 per cent and British Columbia 31.7 per cent.

The pattern of labour force participation of women, that we have observed for Canada, is very similar for the regions. In the group 14-19 years of age, rates are lower in 1965 than in 1946, for all regions. In similar comparisons, rates for the group 25-44 are substantially higher and for the group 45-64, they are more than doubled in all regions.

Participation Rates for Women, Selected Age Groups, by Region
Annual averages

Age group and year	Canada	Atlantic	Quebec	Ontario	Prairies	British Columbia
14-19:						
1965	30.2	25.4	32.1	30.8	29.1	30.7

25-44:						
1965	32.6	25.2	28.4	37.2	33.8	33.2
1946	23.2	17.4	19.4	26.7	26.4	21.8
45-64:						
1965	32.9	27.8	24.8	37.6	36.1	36.3
1946	15.3	13.2	10.7	18.3	17.2	14.4

Seasonal Patterns in the Labour Force

Owing to its geographic location, Canada is subject to wide seasonal variations in climate, which along with other factors, have a pronounced effect on the employment level. These influences also affect the number of unemployed, but to a lesser extent because many people retire from the labour force during their inactive season. This is particularly true of workers in primary industries and construction, students and women in trade and some branches of manufacturing.

Contributing to the seasonal variation mentioned above is the closing of schools for summer vacation. In 1965, some 252,000 persons 14-19 years of age who had been classified as "going to school" in June were in the labour force in July. Of this total, 165,000 were boys and 87,000 were girls. In the same period, a substantial number of women, among them mothers of children of school age, withdraw

from the labour market at this time and re-enter in September. In 1965 women 25 years of age and over in the labour force numbered 1,424,000 in June, 1,366,000 in July and 1,416,000 in September.

The 1963-65 average amplitude of seasonal variation was more than 10 per cent for employment and almost 75 per cent for unemployment. In actual numbers, the change in total employment between the winter trough and the summer peak averaged 709,000 over the past ten years. The drop in total unemployment between the winter high and the summer low points averaged 295,000 over the same period.

Seasonal patterns have not changed much in recent years. Maximum employment for the economy as a whole is attained in July or August while minimum employment occurs in February or March. Conversely, unemployment reaches a peak in February or March and a low point in the summer.

INDICES OF SEASONAL VARIATION

1963-1965 AVERAGES

The amplitude of seasonal variation is much greater for men than for women. The 1963-1965 average for employment was 13 per cent for men and 6 per cent for women while for unemployment it was 83 per cent for men and 29 per cent for women.

The seasonal pattern varies between regions. The peak of economic activity occurs in July or August in all regions. The seasonal low point usually is in March in the Atlantic region, in February in Quebec, Ontario and the Prairie region and in January in British Columbia.

The amount of fluctuation above and below the annual average is quite different among regions. For employment, the amplitude ranges from 8 per cent in Ontario to 21 per cent in the Atlantic region and for unemployment from 64 per cent in British Columbia to 93 per cent in the Prairie region.

Labour force participation rates also exhibit seasonal patterns. Seasonal indices (see chart) show, for specified age and sex groups, fluctuations in the participation rate above and below the annual average. For both men and women, the amplitude of seasonal variation is greatest for those in the 14-19 age group because of the large number of students entering the labour force during summer vacations. For men it is lowest for the groups 25-44 and 45-64 years of age for whom the amplitude of seasonal variation is 2 per cent or less. For women it is lowest for the group 45-64 years of age.

INDICES OF SEASONAL VARIATION—PARTICIPATION RATES

1963-1965 AVERAGES

LABOUR FORCE (More detail in Table 19)

Unemployment was higher in May; employment and total labour force were slightly lower. The unemployment rate was 3.7 per cent.

CONSTRUCTION (More detail in Tables 67, 72 and 73)

Total value of building permits rose slightly in April as the increase in the non-residential sector more than offset the decline in the residential component.

Housing starts and completions were higher in May while dwellings under construction decreased.

value of building permits				new dwelling construction, centres 5,000 and over

EXPORTS AND IMPORTS (More details in Tables 91 and 92)

Total exports rose slightly in April, attributable chiefly to higher exports to the United Kingdom.
Imports were generally lower in April.

SELECTED QUARTERLY SERIES (More detail in Tables 7, 11, 69, 70, 71, 75, 90 and 104)

Gross National Product rose 3.6 per cent in the first quarter, as an increase of 1.1 per cent in prices reduced the gain to 2.5 per cent in real terms.

Consumer credit expansion continued in the first quarter.

¹Gross National Product at market prices excluding accrued net income of farm operators from farm production. ²Before dividends paid to non-residents; see also footnotes on Table 113. ³Total of all monthly and quarterly series as in column 14, Table 90.

PRICES (More detail in Tables 37, 38, 39, 93, 94 and 114)

The general wholesale index and the index of thirty industrial materials were little changed in May.
The index of industrial common stocks fell back 4.2 per cent in May.
The consumer price index edged slightly up in May principally due to a rise in the service component.

¹The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. ²Includes logging, fishing, trapping and hunting. ³Includes mechanical and construction. ⁴Includes a small number in non-specified occupations. ⁵Does not include students entering Canada on students' visas. ⁶Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force. Source: Quarterly Bulletin, Department of Citizenship and Immigration.

¹Includes change in farm inventories. The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for withdrawals of grain from farm stocks and the change in livestock items. Because of arbitrary elements, too precise an interpretation should not be given to the series. ²Includes residual error of estimate. Source at bottom of Table 12.

¹Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. ²The labour force as a percentage of the population 14 years of age and over. ³The unemployed as a percentage of the labour force. ¹See footnote 1, table 19. Labour force obtained as the sum of employed and unemployed from tables 21 and 23. ²Canada totals, obtained by summing the seasonally adjusted data for the five regions, are usually different from the totals given on page S-1. These differences are small and are due to a statistical discrepancy. Source: The Labour Force, (71-001) D.B.S.

¹In calculating time loss, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such as those laid off as a result of a work stoppage is not included. ²The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; the total, however, includes all work stoppages. The agricultural, finance, insurance and real estate and public administration and defence industries are not shown separately; should strikes occur in these industries, they also will be shown in the total. ³Includes miscellaneous manufacturing industries. ⁴Includes also publishing and allied industries. ⁵Includes also the storage and communication industries. Source: Labour Gazette, Department of Labour.

¹The data in Tables 28 to 35 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. ²Excludes agriculture, fishing, trapping and public administration and defence. ³Includes storage, electric power, gas and water utilities. ⁴Excludes domestic service. Source: Employment, Average Weekly Wages and Salaries, (72-002), D.B.S.

¹Monthly shipments represent an estimated projection of the latest available census of manufacturer's values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D.B.S.

¹Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. ²Total manufacturing inventory owned by manufacturers including warehouse stocks. ³Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. ⁴End of period. Annual figures for inventories and unfilled orders are end of December values. Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D. B. S.

¹Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. ²100 cu. ft. of solid wood; pulpwood produced for domestic use and excluding exports. ³Customs exports. ⁴Mill shipments destined for export. Sources: Pulpwood Production (25-001), Trade of Canada, Exports (65-004), D. B. S.; Bulletins of Canadian Pulp and Paper Association and Newsprint Association of Canada.

¹Data on shipments relate to rolling mills products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. ²Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. ³Includes appliances and utensils. Note: Some groupings are not entirely comparable to year 1964 due to change in classifications but in general the differences are minimal. ⁴Excluding shipments for re-processing at maker's own plant. Source: Primary Iron and Steel (41-001), D. B. S.

¹Barrels of 35 Canadian gallons. ²Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. ³Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. ⁴Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. ⁵Includes inventories at end of period being held at gas plants and in storage caverns. ⁶Includes stove oil, kerosene and tractor fuel. ⁷Includes aviation gasoline and aviation turbo fuel. ⁸Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. ⁹Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products.

Note: Components may not add to totals due to rounding differences. ¹The data are collected for 1,400 municipalities and individual figures are available on request. Some of the annual totals for 1963 and 1964 differ slightly from the sum of the twelve monthly totals, due to the addition of statistics received too late to be included in the monthly data. Historical data back to 1920 are available in "Historical Monthly Statistics" Catalogue No. 11-503, occasional. Starting with January 1966, the number of municipalities has been reduced to 56 following the annexation of the town of Riverside to the city of Windsor. Source: Building Permits (64-001), D.B.S.

¹The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. Source: Building Permits (64-001), D.B.S.

¹A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 5,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. ²End of period. Source: New Residential Construction (64-002), D. B. S.

Note: Components may not add to totals due to rounding. ¹The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when the current annual totals for all firms are known the following year. ²Excluding trucks. ³The total value of all machines shown in this table is greater than the value shown for farm machinery in Table 87 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. Source: Farm Implement and Equipment Sales (63-009), D.B.S.

¹These indexes are available for January, April and August only. ²Average rates of cash wages paid per month to male hired help on farms. They reflect the average of the wages paid to all male farm help regardless of age and skill. Data are available for January, May and August only. ³Exclusive of Newfoundland. Western grain prices used in the construction of the Index prior to August 1, 1964 are final prices. From August 1, 1964 to date, the western grain prices used in the Index are initial prices only for wheat, oats and barley. ⁴Barley No. 1 feed; hogs grade "B" alive. ⁵Price of 100 lbs. good steer as a percentage of the price of 100 lbs. live hog, grade B. ⁶Price of 100 lbs. good steer as a percentage of the price of 100 lbs. good lamb. ⁷Quotations refer to steers of all weights. ⁸Grade "B1" hogs.

¹Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada.

Data shown for the last three months are not so adjusted.

²Includes stocks held by manufacturers, wholesalers and other warehouses.³Many mills were operating at more than the standard 26 working days in the month.⁴Includes solid, coated, bulk, packages and novelties.⁵Includes beef stews and boiled dinners.⁶Includes tomato sauce, sauces for meat and fish and sauces, other.

¹Total retail trade obtained by summing "By Kinds of Business". The sum of the seasonally adjusted retail trade by regions will not necessarily add up to this total. ²Includes sales of new and used cars, trucks and buses, repair parts and services, tires and tubes, storage batteries, gasoline, some farm implements and a small amount of wholesale trade.

Note: Components may not add to totals due to rounding. ¹Fully secured by marketable bonds and stocks. Excludes loans to finance the purchase of Canada Savings Bonds. ²Includes loans on the security of household property. ³Includes loans to finance companies which are affiliates of retail merchandisers.

⁴Religious, educational, health and welfare institutions. ⁵Not available on a monthly basis. ⁶Differs from general loans in Table 106 by the exclusion of loans to instalment finance companies. Sources: Statistical Summary of the Bank of Canada and Dept. of Finance.

¹Monthly averages for years 1963 and 1964 differ from the averages of the monthly data due to revisions which cannot be allocated by months. ²Includes scheduled and non-scheduled carriers, groups I to IV. These groups cover all air carriers with gross operating revenues of over \$60,000 annually prior to January, 1964 and over \$100,000 annually since. ³United States and other foreign carriers. Excludes in transit passengers. ⁴Cargo includes air freight and express but excludes mail and excess baggage. ⁵Data prior to 1964 do not include bulk transportation. Because of survey limitations, data after January 1, 1964 refer only to aircraft having a minimum authorized take-off weight on wheels in excess of 18,000 lbs. Source: Civil Aviation (51-001), D. B. S.

¹The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does not include failures, sales or seizures carried out under other legislation. The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ontario, Prairie provinces and British Columbia from the total. ²In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. ¹Excluding revivals, increases, dividend additions, reinsurance acquired, credit insurance and pension bonds without insurance. Value totals are estimates projected from the sales reported by 34 companies operating in Canada representing 82% of new ordinary and 83% of new group contracts. ²The monthly Canada totals for 1964 do not correspond to the sum of the provincial totals as revisions applied to the national total are not yet available for the provinces. Neither the monthly figures for 1964 nor the monthly averages for 1964 have been revised to agree with the Canada total. ³Total new settled-for ordinary sales in Canada. ⁴Under new or amended contracts.

¹The definition of profits before taxes is based mainly on the accounting definition used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by sample of all companies incorporated in Canada (excluding government-owned companies). ²As is evident from the above footnote, the data reporting unit is the company; the data are therefore not entirely comparable with data where the establishment is the reporting unit. ³Includes also the furniture and furnishings industry. ⁴Includes the primary metal, the metal fabricating, the machinery and the transportation equipment industries. ⁵Includes tobacco products, leather and miscellaneous manufacturing industries. ⁶Includes also storage and communication industries. ⁷Includes agriculture, forestry, fishing and construction. Source: Corporation Profits (61-003), D. B. S.

RECENT DEVELOPMENTS IN THE FIELD OF REGIONAL STATISTICS AND REGIONAL CLASSIFICATION SYSTEMS

Introduction

In recent years, there has been an accelerating interest in, and demand for, more comprehensive and timely statistics relating to regional, provincial and sub-provincial¹ areas in Canada. To a considerable extent this demand reflects the intense interest in economic planning and development in a number of provinces, and the emergence at both federal and provincial levels of departments and agencies concerned with area research and development.

Two requirements have emerged. The first is to extend the geographic presentation of existing series, which in itself involves cost and other considerations. The second is that the new demands have called for new types of series, to provide important intercensal sub-provincial economic data on a reasonably current basis. The cost of producing these new statistics by standard techniques is such that the possibilities and potential savings of using data arising from administrative channels (rather than conventional statistical surveys) warrant thorough examination.

Important aspects of the problem relate to (1) the wide variety of area units presently used by administrative and statistical agencies; (2) how statistics relating to these different sets of sources and areas may be used in conjunction with each other for particular purposes; (3) whether a common or standard small area classification system for statistical purposes may be developed as a supplement to the variety of existing systems; (4) the administrative mechanisms necessary to facilitate developments in this area, and (5) the need to recognize and exploit the capabilities of modern computer technology.

A recent development in this field has been the formation of a Regional Statistics and Analysis Staff in the Dominion Bureau of Statistics. It is, of course, not the intention that this staff should supplant in any way existing co-operative arrangements between DBS and federal and provincial agencies concerned with collection or analytical use of statistics; rather, it is intended that the staff should strengthen co-ordinating influences and provide assistance, especially in areas involving two or more DBS divisions, and that it should help to increase awareness on the part of provincial, regional, and urban planning and development agencies, of the services DBS has to offer.

Federal Area Classification Systems

Area classification systems presently in use at the Federal level fall into the following main categories:

¹ The term "sub-provincial" includes economic regions, or zones, counties and quasi-counties (census divisions), municipalities and quasi-municipalities (census sub-divisions), metropolitan and urban areas, etc.

(1) Systems based directly on political-legal divisions and sub-divisions, such as municipalities and counties; or statistical equivalents thereto, such as census divisions and sub-divisions (e.g., DBS Draft Standard Geographical Classification and other systems presently employed by the Census and other DBS Divisions).

(2) A variant of the above system, based on post office mailing addresses, classified indirectly into approximations of political sub-divisions (e.g., as used for the Department of National Revenue Taxation Division statistical reports).

(3) Systems based on areas devised solely for specific administrative or operational purposes which frequently do not coincide with political divisions (e.g., National Employment Service local office areas, Unemployment Insurance Commission regions, Department of National Revenue Administrative Districts, Post Office zones).

(4) Administrative or operational Areas which employ groupings of political divisions (e.g. CMHC Field Office System), largely because the using agencies or departments are concerned with these groupings as functional units.

(5) Systems related chiefly to land area and specific physiographic regions (e.g., as used by the Mines and Technical Surveys Department), which typically do not follow political or administrative lines.

(6) Systems based on definitions of points in space by means such as the UTM² system of map reference (e.g., emergency planning). A variant of this system, which allows co-ordination of many sets of mapped or mappable data on the assumption of uniform density or homogeneity of distribution is used in the ARDA Canada Land Inventory Project.

Some Basic Problems

It is evident that several basic problems require resolution.

(1) There is a need to study, and attempt to reconcile, different approaches to area classifications used for different purposes. Physical space or natural area implies boundaries which are relatively permanent and its characteristics are moderately continuous in distribution, within even large areas. Socio-economic space, on the other hand, implies boundaries which may change rapidly because of population movements, communication and transportation innovations, industrial development or relocation and its characteristics are much less uniformly distributed, even within small areas. Finally, political space, although less permanently bounded than physical space, tends to have more inertia than socio-economic space.

² Universal Transverse Mercator.

Readers who wish a more detailed description of the concept of "space" and the difficult yet apparently necessary adjustment required to integrate socio-economic, political and physical space for the purpose of standard area classifications, are referred to the developing literature related to regional problems and their solutions.

(2) There is a problem in pre-structuring organizational arrangements to produce small area data automatically. One approach is through the large scale organizational effort associated with a Census. This technique cannot be applied to current intercensal statistical and administrative data. However, new techniques, applicable to both Census and inter-censal data, are now emerging; particular mention should be made of Postal Code systems, such as the U.S. "Zone Improvement Plan" (ZIP), and developments in automated street address coding using modern computer methods.

(3) Problems of sampling and non-sampling error are more serious for all types of data at small area levels.

(4) The necessity of avoiding inadvertent disclosure of confidential information, directly or indirectly, must be recognized.

Developments in Other Countries

In the United States, Census officials are working with representatives of the academic and business communities on problems of obtaining data for small areas. The US Bureau of the Census is examining, as is DBS, possibilities inherent in some form of geographic grid system of area identification along with other accepted systems and associated developments such as automated geographic coding of street addresses in urban areas.

A Committee has recently been formed by the American Marketing Association to examine the possibility of a standard area unit for both communications and analysis. The following extract from a recent article³ on this subject is of interest:

"Solid arguments can be advanced for separate "area" systems, since each of them evolved in response to a different set of requirements. But it is only within the last few months that all people in the United States who write and phone to people in other geographic areas have learned that they have to conform to two entirely different code systems—Telephone Area Codes and Postal ZIP Codes—merely to be able to communicate with their fellow citizens! . . . Certainly the time is ripe for consideration of a proposal that a **single geographic model should be developed that can be used for both communications and analysis** The time to agree on a measurement model is obviously **before** individual investments in separate systems become too great to permit change. And that time is **now** for the Standard Geographic Unit".

³ Journal of the American Marketing Association, July 1965.

In the United Kingdom, a number of Economic Planning Regions have been set up to deal with regional planning and development. The eleven "Standard Regions for Statistical Purposes" are being brought into line with the Planning Regions, and Departmental statistics will be adjusted to the new boundaries.

The Government of France has grouped the *départements* into twenty-one regions. Government and public bodies which have been using their own regions for administrative or analytical purposes, are being directed to fit their statistics into the new framework. Similar attempts to standardize the geographic structure of information are underway elsewhere. These developments are followed closely by international bodies such as the Organization for European Co-operation and Development.

The Main Possibilities

The following systems of classification in use by Federal departments and agencies appear to be the most promising as a basis for wider use:

(1) **The DBS Draft Standard Geographical Classification System** is one standard small area classification system, based on political lines (municipality and county) or quasi-political lines (census division and sub-division in areas where the municipal structure is non-existent). A Manual describing this system was recently circulated.

The particular emphasis placed on political units as building blocks in this system stems from the important consideration that political subdivisions are the basis on which developments are organized locally, and encompass many systems and facilities related to the dissemination, discussion and implementation of regional development policies. This system can be modified to incorporate the use of quasi-political units, either at the sub-county (census division) level or the sub-municipality (census sub-division) level.

(2) **The Post Office Zoning System** is of special interest, because nearly all inter-censal socio-economic information being collected, and even conventional and private statistical information, involves addresses and, potentially, address codes.

(3) **Point Systems**—Some federal agencies have in the process of development, computerized information systems in which data are related to positions on the earth's surface by means of geographic co-ordinates. Aggregation of the resulting "point data" can be made into any type of "area" that a using agency may require.

The point system alternative holds promise for an ultimate solution because it can deal with both area and point data and does not require the adoption of a "standard small area system" with the rigidity that such a method implies. The main problem is to develop the technology whereby grid co-ordinates can be assigned to data. As mentioned earlier, relevant computer technology for urban areas is already emerging.

Conclusion

Improvement of area coding techniques for some key series, and extension of other series to sub-provincial levels, would lead to possibilities of more socio-economic data in the following fields: intercensal household and population estimates; statistics relating to employment and unemployment at sub-provincial levels; and improved sub-provincial estimates of income.

The question as to whether some agencies or departments might give consideration to changing administrative boundaries, in the interest of producing compatible statistical data, is of considerable importance. Such changes, it would appear, would have to rest primarily on careful consideration of

factors which would relate the operational simplifications and economies, to financial and social costs involved. "Compatible statistics" could, in some cases, be produced through additional coding and sorting operations without requiring changes in administrative boundaries.

In summary, there are many issues confronting the development of regional statistics; however, there are a number of important technical developments emerging which may help in the resolution of these issues. It is hoped that present and potential users of small area data will make their specific needs known to the Dominion Bureau of Statistics (Regional Statistics and Analysis Staff), in order that their views may be taken into account in the development of this important area of statistics.

LABOUR FORCE (More detail in Table 19)

Total labour force, employment and unemployment were slightly lower in June; the unemployment rate was 3.7 per cent.

		total labour force	total employed	employed non-agriculture	unemployed	unemployment rate	not in the labour force

INDUSTRIAL PRODUCTION (More detail in Table 16)

The index of industrial production rose by 0.4 per cent in May as gains of 1.3% in mining and 4.6% in electric power and gas utilities were partially offset by a marginal decline in the manufacturing component.

	total industrial production (1949=100)	manufacturing (1949=100)			(1949=100)

RETAIL TRADE, MOTOR VEHICLE SALES (More detail in Tables 56 and 85)

Total retail trade declined 1.2 per cent in May, as the decreases in the individual components more than offset the gains recorded in the other sub-groups.

Total sales of new motor vehicles dropped nearly 7 per cent in May with the decline in American passenger car sales accounting for virtually all of the loss.

SELECTED MONTHLY SERIES (More detail in Tables 45, 90, 98 and 108)

New orders and shipments in manufacturing were lower in May while unfilled orders and inventories gained in the period.
 Rail revenue freight loaded dropped in June from the level of the preceding months.
 Value of cheques cashed in clearing centres picked up in May following the decline in April.

manufacturing, all industries

¹Gross National Product at market prices excluding accrued net income of farm operators from farm production. ²Before dividends paid to non-residents; see also footnotes on Table 113. ³Total of all monthly and quarterly series as in column 14, Table 90. ⁴This series does not tie-in with the revised data in tables 75 and 76.

PRICES (More detail in Tables 37, 38, 39, 93, 94 and 114)

The general wholesale index and the index of industrial common stocks were fractionally higher in June.

The index of thirty industrial materials moved back 0.5% in June.

The consumer price index was again higher in June, principally as a result of increases in the food and service components.

		general wholesale index	thirty industrial materials	export prices	import prices	industrial common stocks	consumer price index (1949=100)

¹The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. ²Includes logging, fishing, trapping and hunting. ³Includes mechanical and construction. ⁴Includes a small number in non-specified occupations. ⁵Does not include students entering Canada on students' visas. ⁶Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force. Source: Quarterly Bulletin, Department of Citizenship and Immigration.

¹Includes change in farm inventories. The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for withdrawals of grain from farm stocks and the change in livestock items. Because of arbitrary elements, too precise an interpretation should not be given to the series. ²Includes residual error of estimate. Source at bottom of Table 12.

¹Quarterly indexes for agriculture and for aggregate domestic product for the current year become available later in the year. ²Includes public administration and defence; hospitals; education; welfare, religion and other community service, n.e.c.; and domestic service. Sources: Index of Industrial Production, (61-005). For detailed description of concepts and methods see Indexes of Real Domestic Product by Industry of Origin, 1935-61, (61-505) D. B. S.

Table 16: industrial production, volume indexes (1949=100)¹, based on the unrevised standard industrial classification

¹Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. ²The labour force as a percentage of the population 14 years of age and over. ³The unemployed as a percentage of the labour force. Source: Labour Force Bulletin, (71-001), D.B.S.

¹See footnote 1, table 19. Labour force obtained as the sum of employed and unemployed from tables 21 and 23. ²Canada totals, obtained by summing the seasonally adjusted data for the five regions, are usually different from the totals given on page S-1. These differences are small and are due to a statistical discrepancy. Source: The Labour Force, (71-001) D.B.S.

¹In calculating time loss, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such as those laid off as a result of a work stoppage is not included. ²The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; the total, however, includes all work stoppages. The agricultural, finance, insurance and real estate and public administration and defence industries are not shown separately; should strikes occur in these industries, they also will be shown in the total. ³Includes miscellaneous manufacturing industries. ⁴Includes also publishing and allied industries. ⁵Includes also the storage and communication industries. Source: Labour Gazette, Department of Labour.

¹The data in Tables 28 to 35 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. ²Excludes agriculture, fishing, trapping and public administration and defence. ³Includes storage, electric power, gas and water utilities. ⁴Excludes domestic service. Source: Employment, Average Weekly Wages and Salaries, (72-002), D.B.S.

¹Monthly shipments represent an estimated projection of the latest available census of manufacturer's values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D.B.S.

¹Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. ²Total manufacturing inventory owned by manufacturers including warehouse stocks. ³Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. ⁴End of period. Annual figures for inventories and unfilled orders are end of December values. Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D. B. S.

¹Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. ²100 cu. ft. of solid wood; pulpwood produced for domestic use and excluding exports. ³Customs exports. ⁴Mill shipments destined for export. Sources: Pulpwood Production (25-001), Trade of Canada, Exports (65-004), D. B. S.; Bulletins of Canadian Pulp and Paper Association and Newsprint Association of Canada.

¹Data on shipments relate to rolling mills products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. ²Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. ³Includes appliances and utensils. Note: Some groupings are not entirely comparable to year 1964 due to change in classifications but in general the differences are minimal. ⁴Excluding shipments for re-processing at maker's own plant. Source: Primary Iron and Steel (41-001), D. B. S.

¹Barrels of 35 Canadian gallons. ²Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. ³Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. ⁴Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. ⁵Includes inventories at end of period being held at gas plants and in storage caverns. ⁶Includes stove oil, kerosene and tractor fuel. ⁷Includes aviation gasoline and aviation turbo fuel. ⁸Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. ⁹Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products.

Source: Refined Petroleum Products (45-004), D. B. S.

¹The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. Source: Building Permits (64-001), D.B.S.

¹A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 5,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. ²End of period. Source: New Residential Construction (64-002), D. B. S.

¹Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and Northwest Territories for which only annual statistics are collected. ²Planks and boards, flooring and square timber. ³Hollow blocks including fireproofing and load-bearing tile. ⁴For building insulation only.

⁵Figures cover the production of firms which normally account for 90 per cent of the total for Canada. ⁶Factory sales of firms which normally account for 96% of total Canadian production.

Source: Concrete Products (44-002), Products made from Canadian Clays (44-005), Asphalt Roofing (45-001), Rigid Insulating Board (36-002), Iron Castings and Cast Iron Pipes and Fittings (41-004), Steel Wire and Specified Wire Products (41-006), Gypsum Products (44-003), Mineral Wool (44-004), Sales of Paints, Varnishes and Lacquers (46-001) and Trade of Canada, Imports (65-007), Exports (65-004), D.B.S.

Note: Components may not add to totals due to rounding. ¹The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when the current annual totals for all firms are known the following year. ²Excluding trucks. ³The total value of all machines shown in this table is greater than the value shown for farm machinery in Table 87 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. Source: Farm Implement and Equipment Sales (63-009), D.B.S.

¹These indexes are available for January, April and August only. ²Average rates of cash wages paid per month to male hired help on farms. They reflect the average of the wages paid to all male farm help regardless of age and skill. Data are available for January, May and August only. ³Exclusive of Newfoundland. Western grain prices used in the construction of the index prior to August 1, 1964 are final prices. From August 1, 1964 to date, the western grain prices used in the index are initial prices only for wheat, oats and barley. ⁴Barley No. 1 feed; hogs grade "B" alive. ⁵Price of 100 lbs. good steer as a percentage of the price of 100 lbs. live hog, grade B. ⁶Price of 100 lbs. good steer as a percentage of the price of 100 lbs. good lamb. ⁷Quotations refer to steers of all weights. ⁸Grade "B1" hogs. Sources: Price Index Numbers of Commodities and Services Used by Farmers (62-004); Farm Wages in Canada (21-002) Occasional; Coarse Grains Quarterly (22-001), D.B.S. and Livestock and Meat Trade Report, Dept. of Agriculture.

¹Overseas clearances plus U.S.imports for domestic use compiled from returns of Canadian elevator licensees and advice from American grain correspondents.²Customs exports are adjusted to reflect actual physical movement of wheat and wheat flour from Canada. Data shown for the last three months are not so adjusted.³Annual data are monthly averages of crop year. ⁴Includes eggs for hatching.

¹Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada.

Data shown for the last three months are not so adjusted.

²Includes stocks held by manufacturers, wholesalers and other warehouses.³Many mills were operating at more than the standard 26 working days in the month.⁴Includes solid, coated, bulk, packages and novelties. ⁵Includes beef stews and boiled dinners. ⁶Includes tomato sauce, sauces for meat and fish and sauces, other.

¹Total retail trade obtained by summing "By Kinds of Business". The sum of the seasonally adjusted retail trade by regions will not necessarily add up to this total. ²Includes sales of new and used cars, trucks and buses, repair parts and services, tires and tubes, storage batteries, gasoline, some farm implements and a small amount of wholesale trade.

¹Monthly averages for years 1964 and 1965 differ from the averages of the monthly data due to revisions which cannot be allocated by months. ²Includes scheduled and non-scheduled carriers, groups I to IV. These groups cover all air carriers with gross operating revenues of over \$60,000 annually prior to January, 1964 and over \$100,000 annually since. ³United States and other foreign carriers. Excludes in transit passengers. ⁴Cargo includes air freight and express but excludes mail and excess baggage. ⁵Data prior to 1964 do not include bulk transportation. Because of survey limitations, data after January 1, 1964 refer only to aircraft having a minimum authorized take-off weight on wheels in excess of 18,000 lbs. Source: Civil Aviation (51-001), D. B. S.

¹The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does not include failures, sales or seizures carried out under other legislation. The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ontario, Prairie provinces and British Columbia from the total. ²In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. ¹Excluding revivals, increases, dividend additions, reinsurance acquired, credit insurance and pension bonds without insurance. Value totals are estimates projected from the sales reported by 34 companies operating in Canada representing 82% of new ordinary and 83% of new group contracts. ²The monthly Canada totals for 1964 do not correspond to the sum of the provincial totals as revisions applied to the national total are not yet available for the provinces. Neither the monthly figures for 1964 nor the monthly averages for 1964 have been revised to agree with the Canada total. ³Total new settled-for ordinary sales in Canada. ⁴Under new or amended contracts.

¹The definition of profits before taxes is based mainly on the accounting definition used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by sample of all companies incorporated in Canada (excluding government-owned companies). ²As is evident from the above footnote, the data reporting unit is the company; the data are therefore not entirely comparable with data where the establishment is the reporting unit. ³Includes also the furniture and furnishings industry. ⁴Includes the primary metal, the metal fabricating, the machinery and the transportation equipment industries. ⁵Includes tobacco products, leather and miscellaneous manufacturing industries. ⁶Includes also storage and communication industries. ⁷Includes agriculture, forestry, fishing and construction. Source: Corporation Profits (61-003), D. B. S.

¹The number of stocks included has varied over the period; the totals shown in the column headings represent the current coverage. ²Stocks included in the mining index are for producing mines. ³Combines the industrials, utilities and finance common stocks. ⁴Stocks included in industrial mines are for companies whose operations include smelting and refining. ⁵The headings for "base metals" and "industrial mines" are not found in the Standard Industrial Classification.

⁶Includes also the machinery industries (except electrical machinery) and the transportation equipment industries.

Note: Some of the current Statistics in this table are not entirely comparable to the corresponding figures of previous years due to transfers of duties which took place during the current year and which have not been adjusted.

¹This statement does not include any disbursements other than regular budgetary expenditures. Excluded, for example, are all government outlays arising from increases in loans, advances and investments. ²Under the Technical and Vocational Training Assistance Act. ³Government contributions under the Hospital Insurance and Diagnostic Services Act. ⁴Includes treatment and rehabilitation services. Sources: Canada Gazette and Dept. of Finance.

A NOTE TO USERS

ANNUAL SUPPLEMENT TO THE CANADIAN STATISTICAL REVIEW (CAT. NO. 11-206):

The fifth issue of the Annual Supplement (1965 edition) has now been released. It contains the latest revised figures and the complete historical record for all series appearing in the S-pages of the monthly Review.

MONTHS FOR CYCLICAL DOMINANCE (M.C.D.):

The user will find this expression in abbreviated form in several tables throughout this publication.

The measure indicates the number of months required on average for emergence of the cyclical trend from the seasonally adjusted series. An M.C.D. of five implies that a five-month moving average is required to offset irregular movements and allow examination of the underlying cyclical trend.

The M.C.D. is used in Tables 17, 18, 20, 21, 22, 23, 24, 25, 28, 29, 42, 43, 44, 45, 67, 85, 90, 91 and 92 to indicate the relative variability of the series. Its value can range from one to six months since values greater than this are not calculated. In the S-section, for series with an M.C.D. of four or more, five-term moving averages are used to aid in charting. These averages are correct for series with an M.C.D. of five, but for M.C.D.'s of four or six they are used as approximations to avoid the problem of centering even-term averages. The M.C.D. is not charted for series with values of three or less, since it does not increase the clarity of the charted series.

2204-501

LARGE ENTERPRISES IN CANADIAN MANUFACTURING

Concern over economic growth is frequently directed to smallness within the economy. Fragmented markets, short runs, inadequate financing, low capital intensity, and bases too small to provide for research and innovation on the scale required to take full advantage of rapidly advancing technology, are all among the influences cited as inhibiting high growth rates. Some of these influences apply primarily at the level of the plant or production unit and others at the entrepreneurial or decision-making and financing level, although the size of the enterprise has implications for the size and character of the production units which it embraces. This article attempts to provide some perspective about bigness within enterprises in Canada.

Although some characteristics of the Canadian economy may be cited which foster smallness, many influences work in the direction of bigness. The rewards for economies of scale demand it. Technological advances lead to increasing capital intensity in many existing industries and to the development of whole new industries dependent on massive amounts of capital. Markets grow in size with rising population and increasing affluence. They widen geographically with improvements and extensions in transportation and communication; mobility of people and of their wants leads increasingly to national, continental and world markets. This trend is in turn reinforced in the case of some industries by the need for country or indeed continent-wide facilities to service increasingly complex products.

A potent and pervasive influence in the direction of bigness lies in the important role of research and development. These are the foundation for much of industrial growth. Frequently so costly that they can be carried out on a significant scale only by large enterprises, they in turn reinforce the growth of these enterprises.

Other factors affecting concentration include vertical integration arising from the need felt by enterprises to ensure the whole range of their activity, extending from control over their raw materials to accessibility of their markets. Diversification may be undertaken with the object of reducing risks of technical obsolescence of an industry or its product, or of mitigating the effects on the enterprise of cyclical swings in demand. Both vertical integration and industrial diversification are facilitated by the availability of capital, either through internally generated savings with their concomitant tax advantage, or through ready access by large successful established enterprises to the capital market. These resources in turn sustain large enterprises through the frequently long and costly period of product gestation. They permit them to assume risks of innovation which might jeopardize the very existence of a smaller enterprise.

Bigness is not surprising, but it can be given overemphasis. It is more likely to be prevalent in goods-producing industries than in the less capital intensive and more localized service industries. Yet there are goods-producing industries where bigness plays no part. And in any event there is a good deal of churning. New manufacturers come into existence, some to flower, some to fail. The more successful, almost by definition, tend to grow, and may indeed merge with other larger established enterprises which can provide them with the sustenance for more rapid growth than would otherwise be possible. The process of innovation continues inexorably both within the great enterprises and at the lowest size level, although there are some grounds for believing that bigness may be growing.

How important statistically are the large enterprises in manufacturing? There are at least three units of industrial and corporate organization and activity which are in statistical use and may be used in analyses of concentration. This note brings together the data on manufacturing for enterprises or aggregations of firms under common ownership and financial control, which are the units having greatest entrepreneurial and financial significance, and those of establishments, the smallest units which are separate operating entities capable of reporting all elements of basic industrial statistics. (The intermediate unit, which may be equivalent to both the enterprise and the establishment, is the corporation or firm, generally a legal entity with tax and to a lesser extent internal organizational significance.)

At the beginning of the decade there were 230 enterprises in Canada which employed more than \$25 million of long-term capital in Canada. They covered a broad spectrum of Canadian industry and commerce. Based upon their principal activity, 85 of them can be classed under manufacturing, exclusive of the integrated petroleum industry. Together they accounted for \$7 billion of the \$12¼ billion of long-term capital employed by manufacturing enterprises in Canada. Some of this capital was of course employed in ancillary activities in other industries, while at the same time some of the capital employed in enterprises classified as non-manufacturing (particularly the petroleum and natural gas industry and mining) was devoted to manufacturing activity. A large proportion of the investment in Canadian manufacturing is thus concentrated in a relatively few enterprises.

At the end of World War II there were only 20 manufacturing enterprises in this size group, employing just over \$1 billion of long-term capital. By 1953, the number had reached 55 covering some \$3,450 million of the total of more than \$7½ billion employed in the industry. In part the changes in each period reflect the rising cost of new and replacement investment, so that in real terms the

dividing line has been falling. In part they represent growth through the retention of earnings or the raising of new capital and in part they represent the effect of mergers.

In 1961, although constituting only 3 per cent of Canada's 32,415 manufacturing establishments, the 984 establishments of enterprises with an aggregate investment in Canada of more than \$25 million provided 29.7 per cent of all employment, 36.2 per cent of all salaries and wages paid, and 43.8 per cent of the factory shipments, of Canadian manufacturing industry. As might be expected, salaries and wages paid by establishments in this group, at \$5,036 per employee, were significantly higher than the manufacturing industry average of \$4,136 but in total represented only 42.7 per cent of value added by manufacture compared with the industry average of 49.0 per cent, presumably reflecting higher capital intensity.

The average number of employees per establishment at 382 was almost ten times the industry average of 39, and value added per employee was also appreciably higher (\$11,781 compared with \$8,445).

The aggregate investment per employee engaged in manufacturing, at \$18,600 was nearly double the industry average of \$9,700; this may, in part, reflect the existence of highly integrated concerns whose operations extend vertically into non-manufacturing activities, although it should be noted that the large manufacturing establishments of petroleum and mining enterprises whose value is excluded are highly capital intensive.

In considering the role of large enterprises it is well to remember the greatly varied character of different industries. By far the largest number of manufacturing establishments (7,444 in 1961) is to be found in the food and beverage industries. While this major industry group embraces some very large production units, more than a third (2,529) of the total is made up of bakeries with an average of only 14 employees; butter and cheese plants, and feed manufacturers (1,872 establishments in all) with an average employment of less than 8, account for a further quarter of the food and beverage total. In fact ten industries characterized by large numbers

of small establishments—sawmills, bakeries, butter and cheese plants, pasteurizing plants, feed manufacturers, men's and women's clothing factories, printing and publishing, printing and bookbinding, and household furniture (seven of which are among the 20 leading industries)—together account for 40 per cent of the total number of manufacturing establishments. At the other end of the scale, manufacturing establishments in smelting and refining, petroleum refining, motor vehicle manufacturing, and iron and steel mills, for example, tend to be very large.

Numerically, the establishments of large enterprises account for only 3.0 per cent of the total, but range from zero to 42.9 per cent of the different major industrial groups of manufacturing activity under the Standard Industrial Classification, tending to vary inversely with the total number of establishments in the group. They represent about 3.8 per cent by number of the 7,444 food and beverage establishments in manufacturing, only 1.0 per cent of the 5,251 wood establishments, and 0.1 per cent of the printing, publishing and allied establishments. At the other end of the industrial ranking by number of establishments, large enterprises represent 14.0 per cent of the 93 rubber establishments, 42.9 per cent of the 91 petroleum and coal products establishments, and 23.7 per cent of the 38 tobacco products establishments.

This tendency does not, however, hold when the examination relates to the selling value of factory shipments rather than the number of establishments. Here the large enterprises account for 43.8 per cent, ranging for major groups between zero and 95.4 per cent. For the three leading industrial groups, food and beverages (\$4,905 million), primary metal (\$2,806 million), and paper and allied industries (\$2,206 million), the proportions representing establishments of the large enterprises are 32.2 per cent, 78.2 per cent, and 70.9 per cent respectively. Not unexpectedly the proportion for petroleum and coal products is 95.4 per cent. At the other end of the scale in leather (\$291 million) and knitting mills (\$219 million) establishments of large enterprises account for less than 5 per cent of the selling value of factory shipments, but in the two preceding groups, tobacco products (\$335 million) and rubber (\$331 million) the proportions rise to 45.5 per cent and 52.3 per cent respectively.

MANUFACTURING OPERATIONS IN CANADA OF FOREIGN-CONTROLLED ENTERPRISES

A new study confirms the importance in Canadian manufacturing industry of foreign-controlled enterprises, as well as the important role which foreign investment plays in total Canadian economic activity. In 1961, 1,464 foreign-controlled manufacturing establishments representing the bulk of foreign-controlled investment in Canadian manufacturing and comprising 4.5 per cent of all manufacturing establishments in Canada, accounted for 29.4 per cent of all employment provided, 34.5 per cent of all salaries and wages paid, and 40.4 per cent of all factory shipments made by Canadian manufacturing establishments. The relative importance of foreign-controlled plants was greatest in Ontario, where their shipments represented 48 per cent of total shipments. Foreign control varied much more widely by industrial group; the selling value of foreign-controlled factory shipments ranged from 2.3 per cent of the clothing industries' total to 89.9 per cent of the total for the petroleum and coal products' industries.

The foreign-controlled manufacturing establishments selected for the study covered all those forming part of foreign-controlled enterprises having more than \$1 million of long-term capital employed in Canada.

The selected United States controlled manufacturing establishments numbered 1,108 (3.4 per cent of manufacturing establishments) and accounted for factory shipments valued at \$7,896 million or some 46 per cent more than the corresponding figure of \$5,420 million at the time of the last study for 1953. This represented almost 33 per cent of 1961 shipments by all manufacturing establishments or nearly 3 percentage points more than in 1953. The 289 establishments controlled in the United Kingdom constituted 0.9 per cent of all establishments and gave rise to factory shipments valued at \$1,568 million or 6.5 per cent of all Canadian factory shipments. Shipments of \$327 million (1.3 per cent of total factory shipments) originated with the 71 establishments controlled in all other foreign countries.

On average the selected foreign-controlled enterprises provided more employment per establishment, higher wages and salaries, and a higher output per employee than the average for all manufacturing industry. Selected establishments controlled in the United States, the United Kingdom and other foreign countries had, on average, 257, 267, and 153 employees, respectively, compared with the industry average of 39; paid salaries and wages per employee of \$4,889, \$4,661, and \$4,805 respectively (the industry average was \$4,136) and had shipments per employee of \$27,758, \$20,329 and \$30,212 compared with the industry-wide figure of \$19,165. The value added by manufacture per employee averaged \$11,999, \$9,408 and \$11,904 re-

spectively for enterprises controlled in the United States, United Kingdom and other countries compared with an average of \$8,445 for all enterprises.

In part these differences¹ probably reflect the generally higher capital intensity of the foreign-controlled enterprises covered in the survey, with the possibility that their manufacturing operations include a higher degree of vertical integration and are more concentrated in those industries which call for large amounts of capital. It is also likely that there is a concentration of foreign interest in the larger firms with greater potential. There is, naturally, relatively little foreign ownership in industries characterized by large numbers of small establishments that make up a significant part of industrial operations.

In 1961, aggregate investment in Canadian manufacturing industry by United States-controlled manufacturing enterprises averaged \$16,900 per employee engaged in manufacturing or some 75 per cent more than the \$9,700 per employee average for the whole industry. Aggregate investment per employee by United Kingdom and other foreign-controlled manufacturing enterprises averaged \$17,100 and \$32,200.

Foreign-controlled manufacturing operations in 1961 were most heavily concentrated in the petroleum and coal products industries, where they represented 89.9 per cent of total factory shipments, in the transportation equipment industries (75.2 per cent), chemicals and chemical products industries (61.5 per cent) and electrical products industries (55.0 per cent). Conversely the impact of foreign control was lowest in the clothing industries, and printing, publishing and allied industries where foreign-controlled shipments formed only 2.3 per cent and 5.9 per cent of total shipments.

The importance of United States control ranged widely from the clothing industries group where the value of shipments from United States-controlled plants constituted only 2.3 per cent of the industry group total to the petroleum and coal products industries (79.5 per cent). In every industry group apart from the tobacco products industries, shipments from establishments controlled in the United Kingdom and all other foreign countries (excluding the United States) kept below 20 per cent of total shipments by the group.

¹ Unfortunately it was not possible to assemble information relating to Canadian-controlled enterprises with an aggregate investment of \$1 million or more. Comparisons of the averages per establishment which related to the same size group for both foreign and Canadian-controlled enterprises would be preferable. It is to be expected that establishment averages for foreign-controlled enterprises will be much greater when they are compared to averages for the total universe irrespective of size considerations.

Turning to the component industries of these major industry groups, foreign-controlled establishments provided 44.9 per cent of the shipments of the 20 leading Canadian industries in 1961, or a rather higher proportion than their 40.4 per cent share of total Canadian shipments. Some degree of foreign control was evident in 1961 in all but two of these industries (printing and publishing, and metal stamping, pressing and coating). In six of the industries, foreign control (as measured by proportion of total factory shipments) exceeded 60 per cent. Foreign control was strongest in motor vehicle manufacturing where it accounted for 99.0 per cent of the selling value of factory shipments, petroleum refining (91.2 per cent) and aircraft and parts manufacturers (87.2 per cent). In contrast, shipments from foreign-controlled butter and cheese plants, men's clothing factories and pasteurizing plants comprised 2.9 per cent, 4.1 per cent and 9.3 per cent of total factory shipments from these respective industries.

No clear pattern emerges to link foreign-controlled plants with the 20 leading industries in 1961 which showed the largest compound annual growth rates of their factory shipments between 1957 and 1963. Both the industry which recorded the highest growth rate in shipments between these two years and the industry which recorded the only decrease had high levels of foreign control. Furthermore, the industry showing the second highest growth rate and the industry showing the lowest growth rate were entirely, or almost entirely, controlled in Canada. (The largest growth rate of 11.8 per cent was recorded by motor vehicle parts and accessories manufacturers; in 1961, 73.9 per cent of the selling value of shipments of this industry came from selected foreign-controlled enterprises. The decrease of 2.1 per cent per annum occurred in aircraft parts manufacturers where in 1961, 87.2 per cent of shipments came from selected foreign-controlled establishments).

LABOUR FORCE (More detail in Table 19)

Unemployment was higher between June and July; employment and total labour force also advanced in the period. Unemployment as a percentage of labour force was 4.1 per cent.

		total labour force	total employed	employed non-agriculture	unemployed	unemployment rate	not in the labour force
		thousands				per cent	thousands

INDUSTRIAL PRODUCTION (More detail in Table 16)

The index of industrial production declined marginally in June for the second consecutive month; the decreases in mining (1.4%) and manufacturing (0.2%) were partially offset by a 0.7% gain in electric power and gas utilities.

		total industrial production (1949=100)	manufacturing (1949=100)			(1949=100)

RETAIL TRADE, NEW MOTOR VEHICLE SALES (More detail in Tables 56 and 85)

Total retail trade rose 4.6% in June following the declines of the previous two months. Increases were recorded in all store types except fuel dealers and jewellery stores.

Total sales of new motor vehicles picked up in June owing to a greater demand for American passenger and total commercial type cars.

retail trade (million dollars)					new motor vehicle sales (million dollars)

CONSTRUCTION (More detail in Tables 67, 72 and 73)

Value of all building permits was lower in June as a result of reduced activity in both the residential and non-residential sectors. Housing starts were down slightly in July while completions increased appreciably for the second successive month. Dwellings under construction continued the downward trend prevailing the last three months.

value of building permits				new dwelling construction, centres 5,000 and over

SELECTED MONTHLY SERIES (More detail in Tables 45, 90, 98 and 108)

New orders in manufacturing industries declined in June while inventories, shipments and unfilled orders showed marginal changes. Rail revenue freight loaded dropped noticeably in July from the level of previous months. Cheques cashed in clearing centres reversed its previous gain recorded in May (+\$3.60 billion) with a loss of \$2.76 billion in June.

PRICES (More detail in Tables 37, 38, 39, 93, 94 and 114)

The general wholesale index remained virtually unchanged in July.

The index of industrial common stocks moved down fractionally in July.

The consumer price index advanced 0.3 per cent to 144.3 in July, with the increase resulting mainly from a 1.2% rise in the food component and a small advance in services.

¹The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. ²Includes logging, fishing, trapping and hunting. ³Includes mechanical and construction. ⁴Includes a small number in non-specified occupations. ⁵Does not include students entering Canada on students' visas. ⁶Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force.

¹Figures for births, marriages and deaths for 1965 and 1966 are provisional and represent registrations filed in provincial vital statistics offices during the month under review, regardless of the month of occurrence. Figures for these years are exclusive of the Yukon and the Northwest Territories. Births and deaths are also exclusive of stillbirths.

Sources: Vital Statistics (84-001), D. B. S.

Table 7: national income and gross national product (million dollars)

years and quarters	salaries, wages and supplementary labour income	military pay and allowances	corporation profits before taxes	deduct: dividends paid to non-residents	rent, interest and miscellaneous investment income	accrued net income of farm operators from farm production ¹	net income of non-farm unincorporated business	inventory valuation adjustment	net national income at factor cost	indirect taxes less subsidies	capital consumption allowances and miscellaneous valuation adjustments	gross national product at market prices ²

¹Includes change in farm inventories. The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for withdrawals of grain from farm stocks and the change in livestock items. Because of arbitrary elements, too precise an interpretation should not be given to the series. ²Includes residual error of estimate. Source at bottom of Table 12.

¹Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. ²The labour force as a percentage of the population 14 years of age and over. ³The unemployed as a percentage of the labour force. ¹See footnote 1, table 19. Labour force obtained as the sum of employed and unemployed from tables 21 and 23. ²Canada totals, obtained by summing the seasonally adjusted data for the five regions, are usually different from the totals given on page S-1. These differences are small and are due to a statistical discrepancy. Source: The Labour Force, (71-001) D.B.S.

¹In calculating time loss, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such as those laid off as a result of a work stoppage is not included. ²The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; the total, however, includes all work stoppages. ³The agricultural, finance, insurance and real estate and public administration and defence industries are not shown separately; should strikes occur in these industries, they also will be shown in the total. ⁴Includes miscellaneous manufacturing industries. ⁵Includes also publishing and allied industries. ⁶Includes also the storage and communication industries. Source: Labour Gazette, Department of Labour.

Table 28: employment indexes,¹ by industrial divisions (1961=100) based on the 1960 standard industrial classification

monthly averages	industrial composite ²	forestry	mining, including milling	manufacturing			con-struction	transportation, communication and other utilities ³	trade		finance, insurance and real estate	service ⁴

¹The data in Tables 28 to 35 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. ²Excludes agriculture, fishing, trapping and public administration and defence. ³Includes storage, electric power, gas and water utilities. ⁴Excludes domestic service. ¹Monthly shipments represent an estimated projection of the latest available census of manufacturer's values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D.B.S.

Table 41: manufacturing inventories¹ by industries as in the revised standard industrial classification (million dollars)

¹Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. ²Total manufacturing inventory owned by manufacturers including warehouse stocks. ³Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. ⁴End of period. Annual figures for inventories and unfilled orders are end of December values.

¹Data on shipments relate to rolling mills products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. ²Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. ³Includes appliances and utensils. Note: Some groupings are not entirely comparable to year 1964 due to change in classifications but in general the differences are minimal. ⁴Excluding shipments for re-processing at maker's own plant. Source: Primary Iron and Steel (41-001), D. B. S.

Note: Components may not add to totals due to rounding. ¹Includes crude oil, condensate and pentanes plus. ²Deliveries to refineries and exports do not add to total new supply due to losses, other uses and inventory changes. ³Gross new production by field and processing plants less field flared and waste, Canadian sources only. ⁴By gas utilities, Canadian sources only. Sources: Crude Petroleum and Natural Gas Production (26-006) and Sales of Manufactured and Natural Gas (45-005), D. B. S.

¹Barrels of 35 Canadian gallons. ²Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. ³Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. ⁴Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. ⁵Includes inventories at end of period being held at gas plants and in storage caverns. ⁶Includes stove oil, kerosene and tractor fuel. ⁷Includes aviation gasoline and aviation turbo fuel. ⁸Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. ⁹Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products.

Note: Components may not add to totals due to rounding differences. ¹The data are collected for 1,400 municipalities and individual figures are available on request. Historical data back to 1920 are available in "Historical Monthly Statistics" Catalogue No. 11-503, occasional. Starting with January 1966, the number of municipalities has been reduced to 56 following the annexation of the town of Riverside to the city of Windsor. Source: Building Permits (64-001), D. B. S.

¹The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. Source: Building Permits (64-001), D. B. S.

¹A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 5,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. ²End of period. Source: New Residential Construction (64-002), D. B. S.

¹Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and Northwest Territories for which only annual statistics are collected. ²Planks and boards, flooring and square timber. ³Hollow blocks including fireproofing and load-bearing tile. ⁴For building insulation only.

⁵Figures cover the production of firms which normally account for 90 per cent of the total for Canada. ⁶Factory sales of firms which normally account for 96% of total Canadian production.

Note: Components may not add to totals due to rounding. ¹The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when the current annual totals for all firms are known the following year. ²Excluding trucks. ³The total value of all machines shown in this table is greater than the value shown for farm machinery in Table 87 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. Source: Farm Implement and Equipment Sales (63-009), D.B.S.

¹These indexes are available for January, April and August only. ²Average rates of cash wages paid per month to male hired help on farms. They reflect the average of the wages paid to all male farm help regardless of age and skill. Data are available for January, May and August only. ³Exclusive of Newfoundland. Western grain prices used in the construction of the Index prior to August 1, 1965 are final prices. From August 1, 1965 to date, the western grain prices used in the Index are initial prices only for wheat, oats and barley. ⁴Barley No. 1 feed; hogs grade "B" alive. ⁵Price of 100 lbs. good steer as a percentage of the price of 100 lbs. live hog, grade B. ⁶Price of 100 lbs. good steer as a percentage of the price of 100 lbs. good lamb. ⁷Quotations refer to steers of all weights. ⁸Grade "B1" hogs. Sources: Price Index Numbers of Commodities and Services Used by Farmers (62-004); Farm Wages in Canada (21-002) Occasional; Coarse Grains Quarterly (22-001), D.B.S. and Livestock and Meat Trade Report, Dept. of Agriculture.

¹Overseas clearances plus U.S. imports for domestic use compiled from returns of Canadian elevator licensees and advice from American grain correspondents.

²Customs exports are adjusted to reflect actual physical movement of wheat and wheat flour from Canada. Data shown for the last three months are not so adjusted.

³Annual data are monthly averages of crop year. ⁴Includes eggs for hatching. Sources: Coarse Grains Quarterly (22-001), Wheat Review (22-005), and Trade of Canada, Exports (65-004), D. B. S.

¹Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last three months are not so adjusted.

²Includes stocks held by manufacturers, wholesalers and other warehouses. ³Many mills were operating at more than the standard 26 working days in the month.

⁴Includes solid, coated, bulk, packages and novelties. ⁵Includes beef stews and boiled dinners. ⁶Includes tomato sauce, sauces for meat and fish and sauces, other.

¹Total retail trade obtained by summing "By Kinds of Business". The sum of the seasonally adjusted retail trade by regions will not necessarily add up to this total. ²Includes sales of new and used cars, trucks and buses, repair parts and services, tires and tubes, storage batteries, gasoline, some farm implements and a small amount of wholesale trade.

¹Monthly averages for years 1964 and 1965 differ from the averages of the monthly data due to revisions which cannot be allocated by months. ²Includes scheduled and non-scheduled carriers, groups I to IV. These groups cover all air carriers with gross operating revenues of over \$60,000 annually prior to January, 1964 and over \$100,000 annually since. ³United States and other foreign carriers. Excludes in transit passengers. ⁴Cargo includes air freight and express but excludes mail and excess baggage. ⁵Data prior to 1964 do not include bulk transportation. Because of survey limitations, data after January 1, 1964 refer only to aircraft having a minimum authorized take-off weight on wheels in excess of 18,000 lbs. Source: Civil Aviation (51-001), D. B. S.

¹The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does not include failures, sales or seizures carried out under other legislation. The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ontario, Prairie provinces and British Columbia from the total. ²In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. ¹Excluding revivals, increases, dividend additions, reinsurance acquired, credit insurance and pension bonds without insurance. Value totals are estimates projected from the sales reported by 34 companies operating in Canada representing 82% of new ordinary and 83% of new group contracts. ²The monthly Canada totals for 1964 do not correspond to the sum of the provincial totals as revisions applied to the national total are not yet available for the provinces. Neither the monthly figures for 1964 nor the monthly averages for 1964 have been revised to agree with the Canada total. ³Total new settled-for ordinary sales in Canada.

⁴Under new or amended contracts.

¹The definition of profits before taxes is based mainly on the accounting definition used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by sample of all companies incorporated in Canada (excluding government-owned companies). ²As is evident from the above footnote, the data reporting unit is the company; the data are therefore not entirely comparable with data where the establishment is the reporting unit. ³Includes also the furniture and furnishings industry. ⁴Includes the primary metal, the metal fabricating, the machinery and the transportation equipment industries. ⁵Includes tobacco products, leather and miscellaneous manufacturing industries. ⁶Includes also storage and communication industries. ⁷Includes agriculture, forestry, fishing and construction. Source: Corporation Profits (61-003), D. B. S.

A NOTE TO USERS

MODIFICATION:

The contents of Table 107 "Currency Outside Banks and Chartered Bank Deposits" have been changed. Beginning with this issue, a breakdown of the chartered banks "other deposits" category is provided as additional information. The non-personal and notice deposits series and the demand deposits are introduced and will now be published as separate series. The data prior to November 1964 are now on an average of Wednesdays basis whereby assuming continuity in the series presented.

REVISIONS:

(1) The seasonally adjusted data on total labour force, employment, unemployment and the unemployment rate on page S-1 and for the Ontario and Quebec regions in tables 20, 21, 23 and 24 have been revised starting with January 1966. The unadjusted figures for the above series are unchanged.

(2) The seasonally adjusted data on housing completions in centres of 5,000 and over (page S-6) have been revised for the entire year 1964. The Weekly Supplement to the Review (Catalogue No. 11-004, September 28 edition) provides the complete revision to this latter series.

(3) The data on the Canadian balance of international payments in tables 95, 96 and 97 have been revised commencing with the first quarter 1964.

Annual Subscription: \$5.00 — Single copy: 50c.

2204-501

NATIONAL ACCOUNTS, INCOME AND EXPENDITURE SECOND QUARTER, 1966

Introductory Review

Following an unusually strong rate of advance in the level of economic activity in the first quarter, Gross National Product in the second quarter increased by 1.6 per cent, of which 1 per cent was attributable to price change.

Domestic demand originating in the government and business sectors continued to show significant increases while consumer spending on goods and on services moderated considerably.

A feature of the second quarter was the sharp drop in demand for new cars, a drop which had a pervasive effect throughout the economy. The decrease in automobile purchases was evident in most of Canada, and in Ontario it was reinforced by high level first quarter purchases associated with the April 1st increase in the Ontario sales tax. With production of new cars declining by less than the decrease in final demand, there was a build-up of automobile inventories at the manufacturing, wholesale, and, most notably at the retail level. There was also a decline in demand for new cars in the United States which, in turn, may possibly have affected Canadian exports of automobiles, which decreased from their high first quarter level, discounting seasonality. By the end of the quarter sales of new cars once again increased, but to a level that was well below that of the preceding four quarters.

Consumer expenditure on non-durable goods and on services showed moderate increases from the first quarter which, however, were largely offset by the decline in durable goods spending. Consequently, total personal expenditure rose by only half of one per cent. After taking account of price increases, personal expenditure showed a fractional decline.

Expenditure on goods and services by all levels of government combined rose by nearly 2½ per cent. This increase was concentrated at the provincial-municipal level. Federal outlays increased only marginally.

Business investment in plant and equipment continued to increase, with a fractional decline in investment in machinery and equipment moderating a gain in expenditures on new non-residential construction. Investment in housing increased by about 3½ per cent, although starts, particularly of apartment dwellings were down in the first half of this year, when compared with the like period of last year.

Investment in inventories in the second quarter reached a level of \$1.2 billion, at annual rates, strongly up from the \$0.7 billion first quarter level. All the major industries showed a build-up of inventories in the second quarter.

Following a sharp contraction in the current account deficit¹ in the first quarter of 1966 to \$0.7 billion, the deficit widened to \$1.0 billion at annual rates in the second quarter. A decline in the merchandise balance was the cause of the increased deficit, with exports of goods declining by about 2 per cent and imports rising by about 1½ per cent. In the first quarter the Ontario trucking strike had somewhat affected the flow of imports, while in the second quarter strikes at St. Lawrence ports coupled with the strikes of British seamen had the same effect on the flows of overseas trade.

Turning to the income components, labour income advanced by about 2 per cent between the first and second quarters, the smallest quarter-to-quarter change in this component since the fourth quarter of 1964. Profits showed a fractional decline from a continuing high level. While accrued farm income² showed little change, net income of non-farm unincorporated business declined by 3 per cent, partly as a result of a decline at the retail level.

In summary, the second quarter was characterized by continued increases in demand in most areas other than consumer spending on durable goods, a large build-up in non-farm business inventories, and a widening of the deficit on current account in part due to special factors. By the last month of the quarter, however, retail trade showed an increase following two months of declines both for motor vehicle dealers and for all other trades taken together. On the other hand, the June index of industrial production showed for the second consecutive month a fractional decline from its April peak.

Price Movements

As previously mentioned, the price component of Gross National Product advanced by 1 per cent between the first and second quarters. Prices for each of the personal expenditure, business gross fixed capital formation, export and import components increased by about 1 per cent or more, but a decline in the implicit price index of government expenditure, the result of special factors, slightly moderated the over-all rate of price change.

The implicit price index of consumer expenditure advanced by over 1 per cent for the second consecutive quarter. The rate of increase in food

¹ National Accounts basis.

² The original estimate of Gross National Product for the first quarter assumed an average crop. This estimate was based on acreage intentions and ten-year average yields. Gross National Product for the first quarter has been revised upward by \$332 million to take account of the August forecast of a record crop.

FOLLOWING THE SHARP INCREASE IN THE PREVIOUS QUARTER, G.N.P. SHOWED A RISE OF 1.6 PER CENT OF WHICH 1 PER CENT WAS PRICE CHANGE

BUSINESS SPENDING ON PLANT AND EQUIPMENT CONTINUED TO INCREASE WHILE INVESTMENT IN INVENTORIES ROSE SHARPLY

SHOWN BELOW ARE THE COMPONENTS OF THE ADVANCE IN THE G. N. P.

* NATIONAL ACCOUNTS BASIS

AT RETAIL, PRICES CONTINUED TO RISE AT ABOUT 1 PER CENT WHILE THE ADVANCE IN THE EARLIER DISTRIBUTIVE STAGES WAS LESS PRONOUNCED

prices moderated somewhat, but non-food commodities increased by over 1 per cent, 0.6 per cent of which was attributable to the increase in the Ontario sales tax. A large part of the increase in the prices

of durable goods also was the result of the sales tax change. The following table details quarter-to-quarter changes in consumer prices over the past five quarters.

Personal Expenditure Price Indexes – Percentage Change from the Preceding Quarter
(Based on seasonally adjusted data)

	1965				1966	
	1 Q	2 Q	3 Q	4 Q	1 Q	2 Q
Food	0.5	2.2	0.5	1.4	3.1	1.2
Non-food commodities	—	0.2	0.1	0.3	0.4	1.3
Total goods	0.2	0.9	0.2	0.6	1.4	1.3
Of which: Non-durable goods	0.4	1.2	0.5	1.1	1.5	1.1
Durable goods	— 0.3	— 0.1	— 0.3	— 0.1	— 0.4	0.9
Services	0.7	0.7	0.9	0.7	1.0	0.9
Total personal expenditure	0.3	0.8	0.4	0.7	1.3	1.1

Price data for July and August suggest an advance of a little less than 1 per cent for consumer expenditure prices between the second and third quarters, with continued increases in food prices.

The seasonally adjusted implicit price index for gross fixed capital formation rose by one per cent this quarter as compared to 0.9 per cent last quarter and 1.2 per cent for the fourth quarter of 1965. However, price increases were not uniformly distributed among the three broad investment categories. The rate of price increase in new residential construction was slightly less this quarter than last quarter—1.2 per cent versus 1.4 per cent. In new non-residential construction, however, there was a sharp acceleration in the rate of price increase, the

index rising 1.6 per cent as contrasted to a rise of 0.9 per cent last quarter. This seems largely due to sharp rises in average hourly earnings in engineering construction.

In contrast to price experience in construction, the implicit price index for new machinery and equipment showed only a marginal increase. (However, an examination of machinery and equipment prices used by various industry groups shows a somewhat larger price increase for manufacturing equipment than for the other major industrial groups.)

These movements are portrayed in the following table which summarizes recent price experience in gross fixed capital formation.

Implicit Price Indexes¹
Gross Fixed Capital Formation – Per cent Change from the Preceding Quarter
and over the Twelve Month Period

	2 Q '65 to 3 Q '65	3 Q '65 to 4 Q '65	4 Q '65 to 1 Q '66	1 Q '66 to 2 Q '66	2 Q '65 to 2 Q '66
Business gross fixed capital formation	0.1	1.2	0.9	1.0	3.2
New residential construction	0.4	1.5	1.4	1.2	4.6
New non-residential construction	0.5	1.8	0.9	1.6	4.9
New machinery and equipment	—	0.6	0.6	0.2	1.3

¹ Seasonally adjusted.

Prices of merchandise exports increased by 0.5 per cent. Declines in the prices of goods such as livestock and meat products partially offset increases in the prices of wheat, lumber and copper. Supply conditions coupled with increased demand have resulted in an increase in copper prices of over 20 per cent during the past twelve months.

Demand Components

Personal expenditure on goods and services, seasonally adjusted at annual rates, reached a level of \$34.1 billion in the second quarter, an advance of only 0.5 per cent over the first quarter. The advance, smallest since the beginning of the current expansion, occurred despite a slight decrease in personal income. After adjustment for price changes, expenditure on goods and services in real terms showed a decline of 0.7 per cent, the first decrease since the first quarter of 1961.

Expenditure on services continued to advance, with a gain of 1.5 per cent over the previous quarter, while expenditures on goods fell 0.2 per cent below their high first quarter level.

Expenditures on non-durable goods showed the greatest buoyancy of any of the major components of consumer expenditure by advancing 2.7 per cent over the first quarter level. The main contributors to this increase were heating fuels and gas, each advancing over 8 per cent, attributable in part to the below normal temperatures in the spring, and provincial and local sales taxes which advanced almost 9 per cent. Food showed an increase of almost 2 per cent. In real terms the advance over the preceding quarter was dampened to 0.6 per cent. Total clothing expenditure, including footwear, after increasing steadily from the third quarter of 1962, declined by 2 per cent from the first quarter. All components of the clothing group turned down after having shown gains in the first quarter of the year. The same was true for household supplies, with soaps and cleaning supplies showing a loss of nearly 4 per cent and other household supplies a loss of about 1.5 per cent.

Demand for durable goods fell 11.0 per cent below the first quarter level, the greatest decrease in the demand for any major component of consumer expenditure since the beginning of the current expansion. The greatest weakness was in new car sales which fell almost 19 per cent below their first quarter level. Both purchases and trade-ins of used cars showed similar sharp declines. Home furnishings and furniture showed declines of between 6 and 7 per cent after making gains of between 7 and 9 per cent in the first quarter. Appliances and television sales declined by nearly 4 per cent in the second quarter, ending a series of continuous gains beginning in the first quarter of 1965. The decline in purchases of non-automotive durable goods as well as the sharp drop in spending on new cars were evident throughout most of Canada, although in Ontario the trend was considerably reinforced by

high level first quarter anticipatory buying related to the April 1st increase of 2 per cent in the Ontario sales tax.

In contrast to durable goods where all the components showed marked decreases, nearly all the components of service expenditures showed an increase over their first quarter levels. Owner-operated transportation showed an increase of 4.5 per cent after declining by 1.5 per cent in the first quarter. Personal care expanded by over 2.5 per cent as against nearly 2 per cent in the preceding quarter. Personal services were the only component to show a decline in sales from the second quarter, dropping by 1 per cent.

The rise in business fixed capital expenditure was \$264 million, seasonally adjusted and at annual rates, or about 2½ per cent. Outlays for housing increased \$80 million over the first quarter rate; for new construction, other than housing, \$208 million; but outlays for new machinery and equipment edged down \$24 million. Total business spending on capital goods, at a seasonally adjusted annual rate, during the first half of the year ran 13 per cent ahead of the year 1965. The latest joint survey by DBS and the Department of Trade and Commerce, of capital spending intentions conducted in late May and June, reported business fixed investment intentions to be \$12,305 million, or 18 per cent higher than 1965. An earlier survey, conducted in late 1965 and January 1966, had reported capital budgets \$11,865 million, or 14 per cent higher. Manufacturing industries with significantly higher capital intentions included foods and beverages, paper, primary metals, and transportation equipment. Utilities with higher budgets included electric power, railway transport, telephones, air transport, and oil and gas pipe lines.

Outlays for new residential construction rose 3.5 per cent in the second quarter. In contrast to a year earlier, the work put into place for single-detached houses increased and for multiple units decreased. Overall, the volume of work put into place was higher. An estimated correction was made for the shift in the number of completions between March and April resulting from the extension of the deadline under the Winter House Building Incentive Programme for single and small multiple dwelling units from March 31 to April 15.

The number of both starts and building permits declined in the second quarter, and the level of new residential outlays may be expected to reflect this decline in the remainder of this year. The federal government has announced its decision against continuing the \$500 winter works bonus in the coming winter, the purpose of stimulating winter building having been accomplished. Despite the boost in NHA interest rates and the rise in conventional mortgage interest rates, the volume of money being attracted into housing has declined. In these circumstances CMHC direct loans have been maintained permitting, as in other recent years, construction under the merchant builder programme.

The annual rate of non-residential construction activity moved from \$4,512 to \$4,720 million, after allowance for seasonal factors. A large part of the gain appeared to be in building-type construction work. Outlays on new machinery and equipment dropped from \$4,928 to \$4,904 million, mainly reflecting a lower rate of investment in automotive transportation equipment.

Exports and Imports of Goods and Services

The deficit in Canada's external account, on a National Accounts' basis, moved from a seasonally adjusted annual rate of \$732 million in the first quarter to \$1,032 million in the second. The change of \$300 million resulted from a drop in the merchandise trade surplus of \$312 million offsetting an improvement of \$12 million in non-merchandise trade.

Exports and Imports of Goods and Services¹

(Seasonally adjusted at annual rates)

	Goods			Services			Current balance
	Exports	Imports	Net	Exports	Imports	Net	
	millions of dollars

1 Q '66 to 2 Q '66 per cent change	- 1.7	1.5		0.8	0.2		

¹ Seasonally adjusted figures for 1965 do not incorporate revisions to the original data made by the Balance of Payments Section as shown in DBS Catalogue No. 67-001 for the second quarter 1966. National Accounts figures do not include allowances for immigrants' or emigrants' funds and inheritances.

The improvement in non-merchandise trade can be ascribed mainly to a drop in net payments in the miscellaneous account, including a much smaller total of official contributions.

Gains were made in exports over the first quarter in wheat clearances, copper, iron ore, crude petroleum, zinc, natural gas, lumber, wood pulp, fertilizers, farm and non-farm machinery. Export declines were recorded in fish, aluminum, nickel, asbestos, and newsprint. Import commodity detail is still incomplete for the second quarter. However, the advance in outlays for machinery, transportation and communication equipment, and other equipment and tools from office furniture to electronic computers, registered in the first quarter over year earlier levels, continued into April.

Labour disputes disrupted trade in both quarters. The trucking strike in Ontario retarded imports from the United States in the first quarter. Work stoppages involving stevedores and freight handlers

in some St. Lawrence ports and the strike of British seamen affected overseas trade in the second quarter.

Export gains in United States markets in the second quarter were more than offset by declines in the United Kingdom and most other areas. United States suppliers accounted for all of the increase in imports. The deficit in merchandise trade with the United States widened in the second quarter.

Business investment in inventories experienced continuing growth, registering an accumulation of \$1,220 million at annual rates as compared to \$660 million in the first quarter, after allowing for seasonal movements. Much of the increase in production in the second quarter found its way into inventory investment. Although the strength was dominated by a heavy investment in all the major industrial groups, the most important expansionary stimulus to inventories in the second quarter came from trade. The following table shows the value of physical change in non-farm business inventories in the first and the second quarters of 1966.

Changes in Non-farm Business Inventories

(Seasonally adjusted at annual rates)

	1966	
	1Q	2Q
	millions of dollars	
Manufacturing	432	388
Durables	436	332
Non-durables	- 4	56
Wholesale	- 88	384
Retail	240	404
"Other" industries	76	44
Totals	660	1,220

Manufacturers continued to accumulate inventories in the second quarter but at a lower rate than in the previous quarter. The accumulation in durables, almost six times more than that in non-durables, was concentrated mostly in the transportation and electrical goods-producing industries. In the stocks of non-durable goods, offsetting movements resulted in a very low investment; sizeable liquidations in the stocks of tobacco, clothing and knitting mills were barely offset by accumulations in food, rubber, textiles, paper and chemicals-producing industries.

Accumulation was evident at all levels of production, most noticeably in the finished goods stage of fabrication. The stock-to-ships ratio for manufacturing as a whole was higher when compared with the ratio of the previous quarter but slightly lower than the average ratio of the current economic expansion.

The heaviest rate of accumulation occurred in the hands of wholesale traders, where the first quarter trend of liquidation reversed to a substantial accumulation. Stocks of durable goods, particularly in commercial, institutional and service equipment and supplies, industrial and transportation equipment and supplies, hardware and construction showed substantial gains. Inventory movements of non-durable goods exerted a moderating influence on the pace of accumulation of total wholesalers' stocks. The stock-to-sales ratio for the industry as a whole was above the average ratio of the current economic expansion.

The strongest influence in the total accumulation was provided by the investment in retail channels. Increases were recorded in both durable and non-durable trades. Stock accumulation in retail trade followed the first quarter pattern of accumulation with a larger build-up particularly in durable goods. Increased holdings of automobiles accounted

for about one-third of the total accumulation in retail trade. The stock-to-sales ratio for retail as a whole was much higher than the average ratio of the current expansion.

Government Sector

Seasonally adjusted at annual rates, total revenues of all governments combined, excluding inter-governmental transfers, increased by 2.5 per cent in the second quarter to a rate of \$18,340 million. Total expenditures rose by 3.5 per cent, to a rate of \$17,784 million, resulting in a decline in the surplus (on a National Accounts basis) from a first quarter rate of \$696 million to a rate of \$556 million.

All components of government expenditure increased during the quarter, with the largest absolute increase occurring in expenditures on goods and services. This increase was concentrated at the provincial-municipal level, caused mainly by higher capital spending. Federal outlays on goods and services increased marginally as the decline in defence outlays from the high level of the first quarter almost offset increased non-defence outlays.

About half of the increase in government revenue was the result of higher employer and employee contributions to the Canada and Quebec Pension Plans. (As previously mentioned, only two months' data are recorded for the first quarter). Revenue from direct taxes remained virtually level as an increase in returns from corporation direct taxes was almost offset by a decline in personal direct tax revenues. The decline occurred entirely at the federal level and was caused in part by some shift in tax refunds from the first quarter to the second quarter. Indirect tax revenues increased by 1 per cent during the quarter. Most of the increase was at the provincial-municipal level and was associated with increased sales tax rates in Ontario and extended tax bases in both Ontario and Saskatchewan.

Income Components

Seasonally adjusted wages, salaries, and supplementary labour income advanced 1.9 per cent in the second quarter³ with total wages and salaries recording an identical increase. This was the smallest quarter-to-quarter change since the fourth quarter of 1964.

The goods-producing industries rose 1.8 per cent and this rate of advance was well below the 5 per cent (fourth quarter of 1965) and 4 per cent (first quarter of 1966) gains occurring in the previous two quarters. Wages and salaries in the second quarter advanced by almost 2.5 per cent for the primary group and construction was up slightly more than 2 per cent. Manufacturing wages and salaries increased 1.5 per cent. Data for manufacturing indicate that unit labour costs have been increasing since the latter part of 1965.

The service-producing industries recorded a gain of 2 per cent in the second quarter. Seasonally-adjusted wages and salaries were up 2.5 per cent for the finance, insurance and real estate and non-government service industries. Government salaries and wages advanced by about 2 per cent. Wages and salaries in trade recorded a gain of just over 1.5 per cent and this was the smallest increase in this industry since the fourth quarter of 1962. Transportation, communication and other utilities increased by about one per cent in the second quarter.

Corporation profits (before taxes and before dividends paid to non-residents) declined about one per cent from the previous quarter. The decline was noted among most manufacturing industries contributing; the exceptions were paper, non-metallic minerals and petroleum and coal. Profits for manufacturing in total showed a 4 per cent decrease and trade also declined noticeably. These movements were tempered by increases in some other industries. Transportation, storage and communication showed one of the larger increases, a rise of 20 per cent, reflecting subsidies paid to railways under freight rate legislation, and the profits of mines, quarries and oil wells increased by about 5 per cent.

Larger capital consumption allowances taken in some industries contributed to the decline in profits. In total, corporate capital consumption allowances increased by \$148 million, seasonally adjusted at annual rates.

Rent, interest and miscellaneous investment income increased by almost 3 per cent over the first quarter. Trading profits of federal enterprises were up by \$80 million at annual rates, partly on account of higher interim subsidies to the railways.

³ Estimates of labour income are usually the summation of monthly figures for the respective quarter. However, because of implementation of the new standard industrial classification together with methodological changes affecting the monthly indicators, it was necessary to make the estimates (for the quarter) on the basis of figures for the first two months of the quarter.

During the second quarter accrued net income of farm operators, seasonally adjusted at annual rates, remained virtually unchanged from the first quarter rate. Rising grain exports increased the profits of the Canadian Wheat Board leading to a higher increase from grain production. This gain was, however, more or less offset by the decline in income from other farm products, particularly tobacco, while income from livestock production remained virtually unchanged.

Net income of non-farm unincorporated business declined by 3 per cent in the second quarter. Net income from retail trade declined sharply, but this was partly offset by small increases in most of the other industries.

Personal Sector

Personal income declined slightly from the first to the second quarter, a reflection of several irregular factors in the two quarters. Net income received by farm operators from farm production fell sharply from the high level of the first quarter when large payments were made to the farmers by the Canadian Wheat Board. Military pay and allowances also fell sharply from an irregularly high first quarter rate. Employer and employee contributions to social insurance and government pension funds, a deduction from personal income, rose by over \$200 million in the quarter due to higher contributions to the Canada and Quebec Pension Plans. Estimates of contributions to the two plans are based on collections rather than amounts accruing with the result that the first quarter estimates included two months data, whereas the second quarter includes three months data.

With total personal income declining and personal spending increasing fractionally, the quarterly ratio of saving fell by \$220 million.

Production by Industry

Seasonally adjusted Real Domestic Product less agriculture for the second quarter of 1966 was 0.8 per cent higher than in the first quarter and 2.8 per cent above the fourth quarter 1965.

Transportation was the largest contributor to the second quarter increase in total non-agricultural real output, followed by mining and forestry. Jointly these three industry divisions accounted for over two-thirds of the second quarter increase in non-agricultural real output. Trade was the only industry division to show a decline from the first quarter level.

Almost three quarters of the 3.5 per cent gain in transportation came from strong increases in air, pipeline and truck transport, which showed increases ranging from 6.5 to 7 per cent.

The next largest contribution to the second quarter increase in non-agricultural real output came from the 2.7 per cent advance in mining, which ac-

counted for about one-fifth of the increase. Within mining, the 9.4 per cent gain in fuel mining originating mostly with crude petroleum mining, accounted for all the gain. The 8.6 per cent increase in the output of the forestry industry accounted for almost another one-fifth of the 0.8 per cent gain in non-agricultural real output, largely as a result of substantial increases in pulpwood production.

Manufacturing, which is usually the largest contributor to changes in non-agricultural real output, showed only a fractional gain in the second quarter, thus accounting for only about 14 per cent of the total gain. Within manufacturing, a 0.9 per cent increase in non-durable manufacturing was considerably dampened by a 0.3 per cent decline in

durables, which originated largely with 1.4 and 3.7 per cent decreases in the iron and steel products and transportation equipment groups.

Most of the remaining industry groups showed increases in the second quarter. Gains of about 2 per cent were recorded by construction and electric power and gas utilities. Public administration and defence and finance, insurance and real estate showed increases in excess of one per cent while personal and business and community services showed fractional gains. Trade was the only industry group to show a decline in the second quarter, with most of the decrease coming from a 4.1 per cent decline in retail trade, while wholesale trade declined fractionally.

LABOUR FORCE (More detail in Table 19)

Employment and total labour force were higher in August while unemployment declined somewhat; the unemployment rate was 4.0 per cent.

		total labour force	total employed	employed non-agriculture	unemployed	unemployment rate	not in the labour force

INDUSTRIAL PRODUCTION (More detail in Table 16)

The index of industrial production fell by 0.8 per cent in July, marking the third consecutive month of decline. With manufacturing virtually unchanged, the decrease was the result of drops of 3.9% and 1.8% in mining and electric power and gas utilities, respectively.

		total industrial production (1949=100)	manufacturing (1949=100)			(1949=100)

INCOME, EARNINGS AND HOURS (More detail in Tables 18, 34 and 35)

Total labour income declined fractionally in May, thus interrupting the upward trend prevailing since February 1963.

Average hourly earnings in manufacturing edged up in May while the average work week, at 40½ hours, continued to be shorter.

		total	wages and salaries in	average hourly earnings in manufacturing			average weekly hours in manufacturing ¹

RETAIL TRADE, NEW MOTOR VEHICLE SALES (More detail in Tables 56 and 85)

Total retail trade declined in July owing to downward movements in most store types.
Total sales of new motor vehicles advanced by 5% in July, reflecting increases in the American and European passenger type cars offset partially by a decrease in the sales of commercial vehicles.

SELECTED MONTHLY SERIES (More detail in Tables 45, 90, 98 and 108)

Manufacturing inventories rose again in July while shipments and new orders showed a decline from June.
 Rail revenue freight loaded gained in August following the drop in July.
 Consumer credit expansion continued in June after an interruption the previous month.

¹Gross National Product at market prices excluding accrued net income of farm operators from farm production. ²Before dividends paid to non-residents; see also footnotes on Table 113. ³Total of all monthly and quarterly series as in column 14, Table 90.

PRICES (More detail in Tables 37, 38, 39, 93, 94 and 114)

The index of thirty industrial materials registered a fourth straight month of decline in August.

The index of industrial common stocks dropped noticeably in August from the level of previous months.

The total consumer price index rose again in August, with most of the increase reflecting higher food prices which moved the food index 1.4% upward.

¹The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. ²Includes logging, fishing, trapping and hunting. ³Includes mechanical and construction. ⁴Includes a small number in non-specified occupations. ⁵Does not include students entering Canada on students' visas. ⁶Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force.

¹Figures for births, marriages and deaths for 1965 and 1966 are provisional and represent registrations filed in provincial vital statistics offices during the month under review, regardless of the month of occurrence. Figures for these years are exclusive of the Yukon and the Northwest Territories. Births and deaths are also exclusive of stillbirths. Sources: Vital Statistics (84-001), D. B. S.

¹Includes change in farm inventories. The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for withdrawals of grain from farm stocks and the change in livestock items. Because of arbitrary elements, too precise an interpretation should not be given to the series. ²Includes residual error of estimate. Source at bottom of Table 12.

Table 8: gross national expenditure (million dollars)

years and quarters	personal expenditure on consumer goods and services	government expenditure on goods and services	business gross fixed capital formation			value of physical change in inventories	exports of goods and services	deduct: imports of goods and services	residual error of estimate	gross national expenditure at market prices

¹Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. ²The labour force as a percentage of the population 14 years of age and over. ³The unemployed as a percentage of the labour force. Source: Labour Force Bulletin, (71-001), D.B.S.

¹See footnote 1, table 19. Labour force obtained as the sum of employed and unemployed from tables 21 and 23. ²Canada totals, obtained by summing the seasonally adjusted data for the five regions, are usually different from the totals given on page S-1. These differences are small and are due to a statistical discrepancy. Source: The Labour Force, (71-001) D.B.S.

¹In calculating time loss, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such as those laid off as a result of a work stoppage is not included. ²The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; the total, however, includes all work stoppages. The agricultural, finance, insurance and real estate and public administration and defence industries are not shown separately; should strikes occur in these industries, they also will be shown in the total. ³Includes miscellaneous manufacturing industries. ⁴Includes also publishing and allied industries. ⁵Includes also the storage and communication industries. Source: Labour Gazette, Department of Labour.

¹The data in Tables 28 to 35 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. ²Excludes agriculture, fishing, trapping and public administration and defence. ³Includes storage, electric power, gas and water utilities. ⁴Excludes domestic service. Source: Employment, Average Weekly Wages and Salaries, (72-002), D.B.S.

¹Monthly shipments represent an estimated projection of the latest available census of manufacturer's values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D.B.S.

Table 41: manufacturing inventories¹ by industries as in the revised standard industrial classification (million dollars)

¹Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. ²Total manufacturing inventory owned by manufacturers including warehouse stocks. ³Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. ⁴End of period. Annual figures for inventories and unfilled orders are end of December values. Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D. B. S.

¹Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. ²100 cu. ft. of solid wood; pulpwood produced for domestic use and excluding exports. ³Customs exports. ⁴Mill shipments destined for export. Sources: Pulpwood Production (25-001), Trade of Canada, Exports (65-004), D. B. S.; Bulletins of Canadian Pulp and Paper Association and Newsprint Association of Canada.

¹Data on shipments relate to rolling mills products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. ²Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. ³Includes appliances and utensils. Note: Some groupings are not entirely comparable to year 1964 due to change in classifications but in general the differences are minimal. ⁴Excluding shipments for re-processing at maker's own plant. Source: Primary Iron and Steel (41-001), D. B. S.

¹Barrels of 35 Canadian gallons. ²Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. ³Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. ⁴Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. ⁵Includes inventories at end of period being held at gas plants and in storage caverns. ⁶Includes stove oil, kerosene and tractor fuel. ⁷Includes aviation gasoline and aviation turbo fuel. ⁸Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. ⁹Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products.

¹The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. Source: Building Permits (64-001), D.B.S.

¹A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 5,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. ²End of period. Source: New Residential Construction (64-002), D. B. S.

Note: Components may not add to totals due to rounding. ¹The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when the current annual totals for all firms are known the following year. ²Excluding trucks. ³The total value of all machines shown in this table is greater than the value shown for farm machinery in Table 87 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. Source: Farm Implement and Equipment Sales (63-009), D.B.S.

¹These indexes are available for January, April and August only. ²Average rates of cash wages paid per month to male hired help on farms. They reflect the average of the wages paid to all male farm help regardless of age and skill. Data are available for January, May and August only. ³Exclusive of Newfoundland. Western grain prices used in the construction of the Index prior to August 1, 1965 are final prices. From August 1, 1965 to date, the western grain prices used in the Index are initial prices only for wheat, oats and barley. ⁴Barley No. 1 feed; hogs grade "B" alive. ⁵Price of 100 lbs. good steer as a percentage of the price of 100 lbs. live hog, grade B. ⁶Price of 100 lbs. good steer as a percentage of the price of 100 lbs. good lamb. ⁷Quotations refer to steers of all weights. ⁸Grade "B1" hogs. Sources: Price Index Numbers of Commodities and Services Used by Farmers (62-004); Farm Wages in Canada (21-002) Occasional; Coarse Grains Quarterly (22-001), D.B.S. and Livestock and Meat Trade Report, Dept. of Agriculture.

¹Overseas clearances plus U.S. imports for domestic use compiled from returns of Canadian elevator licensees and advice from American grain correspondents.²Customs exports are adjusted to reflect actual physical movement of wheat and wheat flour from Canada. Data shown for the last three months are not so adjusted.³Annual data are monthly averages of crop year. ⁴Includes eggs for hatching. Sources: Coarse Grains Quarterly (22-001), Wheat Review (22-005), and Trade of Canada, Exports (65-004), D. B. S.

¹Total retail trade obtained by summing "By Kinds of Business". The sum of the seasonally adjusted retail trade by regions will not necessarily add up to this total. ²Includes sales of new and used cars, trucks and buses, repair parts and services, tires and tubes, storage batteries, gasoline, some farm implements and a small amount of wholesale trade. Source: Retail Trade (63-005), D. B. S.

Table 85: value of retail trade by types of business and provinces, based on the unrevised standard industrial classification—concluded

¹Monthly averages for years 1964 and 1965 differ from the averages of the monthly data due to revisions which cannot be allocated by months. ²Includes scheduled and non-scheduled carriers, groups I to IV. These groups cover all air carriers with gross operating revenues of over \$60,000 annually prior to January, 1964 and over \$100,000 annually since. ³United States and other foreign carriers. Excludes in transit passengers. ⁴Cargo includes air freight and express but excludes mail and excess baggage. ⁵Data prior to 1964 do not include bulk transportation. Because of survey limitations, data after January 1, 1964 refer only to aircraft having a minimum authorized take-off weight on wheels in excess of 18,000 lbs. Source: Civil Aviation (51-001), D. B. S.

¹The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does not include failures, sales or seizures carried out under other legislation. The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ontario, Prairie provinces and British Columbia from the total. ²In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. ¹Excluding revivals, increases, dividend additions, reinsurance acquired, credit insurance and pension bonds without insurance. Value totals are estimates projected from the sales reported by 34 companies operating in Canada representing 82% of new ordinary and 83% of new group contracts. ²The monthly Canada totals for 1964 do not correspond to the sum of the provincial totals as revisions applied to the national total are not yet available for the provinces. Neither the monthly figures for 1964 nor the monthly averages for 1964 have been revised to agree with the Canada total. ³Total new settled-for ordinary sales in Canada.

⁴Under new or amended contracts.

¹The definition of profits before taxes is based mainly on the accounting definition used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by sample of all companies incorporated in Canada (excluding government-owned companies). ²As is evident from the above footnote, the data reporting unit is the company; the data are therefore not entirely comparable with data where the establishment is the reporting unit. ³Includes also the furniture and furnishings industry. ⁴Includes the primary metal, the metal fabricating, the machinery and the transportation equipment industries. ⁵Includes tobacco products, leather and miscellaneous manufacturing industries. ⁶Includes also storage and communication industries. ⁷Includes agriculture, forestry, fishing and construction. Source: Corporation Profits (61-003), D. B. S.

THE CANADIAN FINANCIAL ACCOUNTS

It is expected that in 1967 the Dominion Bureau of Statistics will begin the publication of quarterly Financial Accounts¹ which, along with supporting series, will greatly increase the information available on the financing of economic activity. It is the purpose of this article to describe the Financial Accounts program, to outline some of the problems involved so that potential users will have an opportunity to make suggestions relating to the information collected and published, and to present some preliminary information on financial institutions in Canada.

Background of Financial Accounts

Financial Accounts are a relatively new addition to the social accounting system which includes the national accounts, input-output, real output and other studies. They were first developed in the United States in the late 1940's by Professor Morris Copeland² and in Canada, a study was made in the mid-1950's for the years 1946-54, based on a system developed by L.M. Read.³ In 1959 an interdepartmental committee was formed to investigate the quality and completeness of financial information available in Canada. The decision of the committee was that there were serious gaps in the knowledge of financial activities in Canada and that the work of filling these gaps should centre around the development of quarterly Financial Accounts for Canada.⁴ Development of these quarterly Financial Accounts has continued since 1960, and estimates for a number of sectors and categories have been completed.

The Financial Accounts are a system of social accounting in which (a) the economy is divided into a number of sectors and (b) a "sources and uses of funds statement" is constructed for each sector. When all these sources and uses of funds statements are placed side by side, we obtain (c) the Financial Accounts summary matrix for the economy as a whole.⁵

¹ The term "Financial Accounts" refers to what the U.S. calls "Flow of Funds Accounts" and which in earlier work in Canada were called "National Transactions Accounts". It is consistent with National Accounts terminology and clearly indicates that the accounts deal principally with financial claims.

² Morris A. Copeland, *A Study of Moneyflows in the United States* (New York: National Bureau of Economic Research, 1952).

³ William C. Hood, *Financing of Economic Activity in Canada* (Ottawa: Queen's Printer, 1959), 461-698. For a brief history of Financial Accounts and an excellent description of their rationale, see L.M. Read, "The Development of National Transactions Accounts: Canada's Version of or Substitute for Money Flows Accounts", *The Canadian Journal of Economics and Political Science*, XXIII, February 1957, 42-56.

⁴ A more detailed description of the work of the committee is contained in the *Canadian Statistical Review*, November 1960.

⁵ Lawrence S. Ritter, "The Flow-of-Funds Accounts: A New Approach to Financial Market Analysis", *The Journal of Finance*, XVIII, May 1963, 220. Ritter refers to the Financial Accounts matrix as the flow-of-funds matrix.

Sources and uses of funds statements are a combination of income statements and changes in balance sheet items. Sources of funds are retained income (profits after taxes and dividends), non-cash charges such as depreciation and allowance for future income taxes, and increases in liabilities. The uses are capital expenditures on new and existing buildings, machinery and equipment and land, and investments in financial assets.

Real assets, such as land and buildings, appear only on the books of the owner. Each financial asset, however, implies a corresponding liability, and thus for the total of all sectors, including the rest of the world sector, financial assets are equal to financial liabilities.

Uses of the Financial Accounts

One of the principal purposes of the Financial Accounts is to throw light on how production in the economy is financed. During the course of any period of time, domestic saving plus net capital inflow from abroad is equal to capital formation or, to put it another way, saving less investment is equal to zero. However, although the total is zero, individual sectors, and the entities in the sector, may have surpluses or deficits. The Financial Accounts indicate how funds are transferred from surplus sectors to deficit sectors.

Financial institutions play a key role in this transfer process, bringing lenders and borrowers together by selling claims on themselves to those with funds and using the proceeds to buy the financial obligations of those who desire funds. The Financial Accounts, among other things, make the role of these institutions clear and permit the effectiveness of their operations to be assessed.

The Department of Finance and the Bank of Canada have the responsibility for the fiscal and monetary policy of the nation. Up-to-date knowledge on the economy will assist them in making decisions on the money supply, on the amount, timing and terms of public debt issues and on other matters within their responsibility. Since the late 1940's the National Accounts have been used as a framework for the forecasting of production and the Financial Accounts will permit the forecasting of how this production is financed.

Other users of the Financial Accounts will include the provincial governments, the larger municipal governments, officials of financial institutions and large non-financial corporations and economists in universities and elsewhere. They are concerned with the rate of growth of the different types of financial institutions, the financial instruments used, the effect of changes in interest rates on sources of financing and other problems. The Financial Accounts, by bringing together a large amount of information in a consistent framework, will assist them in their work.

The Framework of the Accounts

Since uses are diverse it is difficult to arrive at a consensus of opinion on the detail of categories and sectors to be used and the format in which they should be presented. To complicate the matter further, because Financial Accounts are so new it is not easy to know before they are used the format most suitable for them.

The United Nations has, almost since its formation, taken a very active role in setting standards for the National Accounts and the development of a social accounting framework. They are at the present time preparing a revision of the 1952 manual⁶ and for the first time the Financial Accounts form part of the system. A number of mimeographed documents relating to proposals for revising the Standard National Accounts have been released⁷ and in 1968 the final document will be produced. Although some changes in decisions can be expected between now and 1968, these will refer to points of detail and not to the basic system.

The United Nations recommendations represent a consensus of thought by experts in the field of social accounting. Canada, through the work of L.M. Read was a pioneer in the linking of Financial Accounts with the National Accounts, and the United Nations approach, which emphasizes this system, fits our thinking. The approach now is to take the United Nations recommendations as a guide and to differ from them primarily because the data are not available or because some details of the classification, which are designed with all developed countries in mind, are not considered to be the most appropriate for Canada.

The basic elements in a set of Financial Accounts are the sectors into which the economy is divided, and the categories into which transactions are grouped. The sectors and categories should be chosen for their analytical usefulness, their comparability with data from other sources and their practicality insofar as collection of information is concerned.

The determination of sectors presents less of a problem than that of the categories. Individual data are (or will be) available for most important businesses and government units in the country. It is therefore possible to group them into sectors and sub-sectors as desired; and to make changes to meet changing conditions or special needs.

There is not the same amount of flexibility in the choosing of categories. The number of questions which can be put on a questionnaire is limited and decisions must be made on which questions should be asked and which should be omitted. As will be discussed later, in Canada the distinction between short-term and long-term assets and liabilities is

not being obtained, and as a result the United Nations categories, which emphasize term, cannot be used.

Sectors (See Appendix A)

The United Nations recommends the distinguishing of five main sectors: (a) non-financial enterprises, corporate and quasi-corporate; (b) financial institutions; (c) general government; (d) private non-financial institutions serving households; and (e) households, including selected private unincorporated businesses.

In Canada it is not possible statistically to isolate private non-financial corporations serving households, nor is it possible to isolate what the United Nations terms quasi-corporations. The rest-of-the-world is taken as a sector in Canada, rather than as an account, as in the United Nations.

The Treatment of Unincorporated Businesses

Unincorporated businesses have long been a sore point in attempts to classify the transactors of the economy. This grouping includes professionals, own account workers, small family type businesses and fairly large unincorporated businesses. Many, if not most, professionals and small businesses do not keep their business transactions completely separate from their personal transactions, and, in particular, do not keep the cash and investments of the business separate from the cash and investments held on personal account.

In the past it was the custom to include unincorporated business in the business sector, with the convention that total net income was transferred to the personal sector. When Financial Accounts were introduced, it was necessary, for lack of better information, to adopt the convention that liquid assets of persons and unincorporated business were included in the personal sector. The United Nations has recommended that unincorporated businesses be included in the personal sector, and this appears to be a realistic approach.

The United Nations has added the proviso however that large unincorporated businesses, which have a complete set of books, be designated as quasi-corporations and included in the business sector. The information needed to follow this recommendation is not available.

Sub-sectoring of the Financial Institutions Sector

The United Nations recommends that financial institutions be sub-sectored to show the following: (a) the monetary system; (b) insurance companies and pension funds; and (c) other financial institutions. In Canada the basic split is: (a) monetary authorities; (b) private financial institutions; and (c) public financial institutions. The private financial institutions are subdivided as in the United Nations system, while the public financial institutions are subdivided by level of government.

Because of the importance of government financial institutions and the specialized nature of some of the largest of them (Central Mortgage and Housing Corporation, General Investment Corpora-

⁶ United Nations Economic and Social Council, *The System of National Accounts and Supporting Tables*, series F. No. 2, with subsequent editions, series F.No. 2, rev. 1 and rev. 2.

⁷ The main documents are E/CN. 3/320, *Revision of the SNA, 1952*; E/CN. 3/345, *Proposals for Revising the SNA, 1952 (June, 1966)*; and E/CN. 3/345/Add. 1, *The Revision of the SNA, 1952*.

tion, etc.), it was felt that the split by level of government would be most useful for analysis. However, as stated earlier, the detail published will permit moving from the Canadian grouping to the United Nations grouping.

Categories (See Appendix B)

It is very difficult to decide on the category detail which should be collected and published. All the information in the Financial Accounts must be reported to DBS or other agencies, and there is a limit to the detail which can be obtained in an administrative or statistical return.

Ideally the following should be available:

- (a) Nature of instrument
- (b) Both remaining and original term to maturity, with particular emphasis on over and under one year
- (c) By whom payable and to whom payable
- (d) Specific requirements for selected categories such as marketability, currency of payment, etc.

In Canada the main emphasis has been put on the nature of the instrument. Remaining term to maturity is not available, excepting where the instrument is short-term by its nature. From-whom to-whom detail is also not available, excepting where a category has only one creditor or one debtor.

During the next year, analysis of economic transactions with the aid of the Financial Accounts will begin. Users of the data will be able to observe the shortcomings of the categories available, and changes can be made in the information requested from businesses and governments.

For purposes of analysis, a frequently useful distinction is between securities and claims held by parent and affiliated companies, (which normally are not for sale) and portfolio securities. A good deal of work is needed to determine whether an economically useful definition of "affiliated" can be arrived at. At the present time it is left to reporting companies to decide on the investments which should be shown as being in affiliated companies. This may be the best procedure, or it might be better to define what should be included here. A further distinction which it is hoped to introduce for equities is between equities traded on the stock exchange and over the counter and private issues.

Sources of Data

Much of the information used in the Financial Accounts is collected and processed in three Divisions of the Dominion Bureau of Statistics—the Business Finance Division, the Governments and Transportation Division and the National Accounts and Balance of Payments Division. These Divisions obtain data through surveys and through making use of reports filed by financial institutions with other government departments.

The Business Finance Division is responsible for the estimation of data for corporations. The basic sources of information are quarterly surveys covering non-financial corporations (with detail by broad industrial groups), trust companies, mortgage loan companies, mutual funds, closed end funds,

investment dealers, sales finance and consumer loan companies, fire and casualty insurance companies and a number of other financial institutions. In 1967 the Business Finance Division will become responsible for the publication of credit union statistics, based primarily on data collected by the provincial governments and credit union centrals.

A quarterly publication *Business Financial Statistics* is now being published. It contains at present balance sheets for several financial institutions and will expand over the next year to provide balance sheet and income and expenditure statements by broad industrial groups for corporations in the economy.

The Governments and Transportation Division is responsible for quarterly estimates for the federal, provincial and municipal governments and their enterprises.

The National Accounts and Balance of Payments Division provides information for the rest-of-the-world sector, and on saving, gross fixed capital formation and inventory changes for all sectors. Balance of payments figures have been published quarterly for a number of years. Some adjustments are required to put this information in a form suitable for the Financial Accounts. The Division also provides the savings estimates which are the link between the National Accounts and the Financial Accounts.

Other Divisions in DBS concerned with the collection of statistics for the Financial Accounts are the Labour Division (trusteed pension funds) and the Merchandising and Services Division (consumer credit statistics). Information collected by the Corporation and Labour Returns Act Administration (CALURA), which is now responsible for tabulating statistical data from corporation income tax returns, is also used in designing samples for corporations and in checking the quality of data reported.

The Bank of Canada, Department of Insurance and Department of Finance provide information on the activities of chartered banks, Quebec savings banks, life insurance companies and fire and casualty insurance companies. Regarding life insurance companies, estimates are based on a sixteen company survey carried out by the Canadian Life Insurance Association.

Financial Institutions in the Summary Matrix

The summary matrix is intended to proffer a comprehensive view of all economic transactions, excluding current revenue and expenditure, taking place between major groups of transactors in the economy. Table 1 shows for 1963 and 1964 the portion of the summary matrix containing financial institutions. To illustrate its use, one category—mortgages—and one sector—banking—are discussed briefly below. It will be immediately clear however that a more extended period of time is needed if it is to be determined whether activities in these years are different from "normal" standards, that up-to-date quarterly data are needed, and that some balance sheet totals are needed to give perspective to the amount of the annual changes.

67. Discrepancy (9-10)	- 4	- 2		- 1	3	- 11	37	47

In 1963, financial institutions increased their holdings of mortgages by \$1,108 million and in 1964 by \$1,513 million. These amounts represented 24 per cent and 30 per cent respectively of total investments in financial assets by financial institutions. The other lending institutions group, which includes trust companies, mortgage loan companies, credit unions and the Quebec savings banks had the largest increase in holdings (\$573 million in 1963 and \$740 million in 1964) followed by the insurance companies and pensions funds group which increased their holdings by \$473 million in 1963 and \$537 million in 1964. The public financial institutions group, which includes the Central Mortgage and Housing Corporation, had an increase in holdings of \$92 million in 1963 and \$271 million in 1964. Holdings of chartered banks declined slightly in both years, as repayments exceeded new commitments.

Financial institutions provide a large part of mortgage funds, but, as would be expected from the nature of their business, raise very little themselves through mortgages. Increases in mortgage debt of financial institutions were only \$2 million in each of the years under study. As the summary matrix shows, they raised the bulk of their funds through holding deposits, borrowing from parent companies or government, issuing bonds and short term paper and, in the case of insurance companies and pension funds, accepting future liabilities for the payment of insurance and pensions.

In 1963 and 1964 chartered banks raised almost all their funds through accepting deposits. In 1963 they made consumer loans of \$249 million and other

loans of \$341 million, while the respective figures for 1964 were \$361 million and \$716 million. In 1964, loans increased by over \$250 million more than deposits, and holdings of government of Canada bonds, and of other bonds, were reduced in order to finance the difference. The growth of the economy, as shown by the National Accounts, was less in 1963 than in either 1962 or 1964, and the chartered banks acquired bonds in 1963, when growth was relatively slow, and sold them in 1964 when business needed funds.

It is interesting to note that whereas in 1963 bank deposits increased by much more than deposits in other deposit accepting institutions (\$1,291 million versus \$761 million), in 1964 the reverse was true (\$815 million versus \$947 million).

Table 2 summarizes, for all financial institutions, sources and uses of funds. Retained income is relatively unimportant as a source of funds. Currency and deposits provided almost half the total sources of funds in 1963 and 38 per cent of the total in 1964. Savings through insurance and pensions are the next largest source of funds, followed by claims on associated enterprises (largely loans to CMHC and to the Exchange Fund) and bond issues.

There was a considerable difference in the pattern of use of funds between 1963 and 1964. Loans and mortgage investments increased sharply while investments in bonds and stocks fell from 35 per cent of total investment to 19 per cent.

TABLE 2. Increases in Financial Assets and Liabilities of Financial Institutions, 1963 and 1964

	1963		1964	
	\$ million	Per cent	\$ million	Per cent
Increases in assets:				
Official holdings of gold and foreign exchange	59	1.3	86	1.7
Currency and deposits	125	2.7	195	3.9
Consumer credit and receivables	600	12.9	775	15.5
Loans	741	16.0	1,042	20.9
Claims on associated enterprises	95	2.0	90	1.8
Mortgages	1,108	23.9	1,513	30.3
Investment in bonds and stocks	1,623	34.9	962	19.3
Other assets	292	6.3	330	6.6
Totals	4,643	100.0	4,993	100.0
Increases in liabilities and equity:				
Retained income	102	2.2	132	2.6
Currency and deposits	2,289	49.3	1,906	38.2
Loans and payables	120	2.6	145	2.9
Claims on associated enterprises	377	8.1	672	13.5
Bonds	365	7.9	519	10.4
Stocks	233	5.0	294	5.9
Insurance and pensions	1,074	23.1	1,183	23.7
Other liabilities and discrepancy	83	1.8	142	2.8
Totals	4,643	100.0	4,993	100.0

APPENDIX A

Classification of Sectors in the Financial Accounts

The groupings of transactors distinguished in the Financial Accounts are outlined below. While the overall structure is taken from the National Accounts, much more emphasis is placed on the various types of financial institutions which in the National Accounts are included along with non-financial businesses in the consolidated business sector.

Description of Sectoring¹

Persons, Unincorporated Business and Private Non-profit Institutions

I.* Persons

II.* Unincorporated business

Non-financial Corporations

III.* Non-financial private corporations

IV.* Non-financial government enterprises

IV.1 Federal

IV.2 Provincial

IV.3 Municipal

Financial Institutions

V.* The monetary authorities

V.1 Bank of Canada

V.2 Exchange fund account

V.3 Other

¹ Sectors marked by an asterisk will be shown separately in the summary matrix. Information on the other sectors will be shown in supplementary tables.

VI. Banks and similar lending institutions

VI.1* Chartered banks

VI.2* Other lending institutions

VI.2.1 Quebec savings banks

VI.2.2 Credit unions and caisses populaires

VI.2.3 Trust companies

VI.2.4 Mortgage loan companies

VI.2.5 Sales finance and consumer loan companies

VII.* Insurance companies and pension funds

VII.1 Life insurance companies

VII.2 Fraternal benefit societies

VII.3 Fire and casualty insurance companies

VII.4 Pension funds

VIII.* Other private financial institutions

VIII.1 Investment dealers

VIII.2 Mutual funds

VIII.3 Closed-end funds

VIII.4 Other n.e.i.

IX.* Public financial institutions

IX.1 Federal

IX.2 Provincial

Government

X.* Federal

XI.* Provincial and municipal

XI.1 Provincial

XI.2 Municipal

XII.* Social security funds

XII.1 Federal

XII.2 Provincial

Other

XIII.* Rest of the world

APPENDIX B

Description of Transaction Categories in the Financial Accounts

The basic criterion underlying the classification of financial claims is the nature of the instrument involved, although consideration has been given to other norms such as liquidity and marketability. The Financial Accounts are designed to provide a consistent and integrated framework in which transactions in financial claims can be recorded, and the categories of transactions employed are limited to those available for all of the major groupings of transactors. Hence, although, for example, quarterly information on transactions in provincial government treasury bills is currently available for life insurance companies, the lack of similar information for other sectors requires that these treasury bills be combined with long-term provincial bonds in the category **provincial government bonds**.

Transaction Categories

1. Official holdings of gold and foreign exchange.
2. Currency and deposits
 - 2.1 Currency and bank deposits (Canadian dollars)
 - 2.2 Deposits in other institutions (Canadian dollars)
 - 2.3 Foreign currency and deposits
3. Receivables
 - 3.1 Consumer credit
 - 3.2 Trade and other receivables
4. Loans
 - 4.1 Bank loans
 - 4.2 Other loans
5. Claims on associated enterprises
 - 5.1 Non-corporate
 - 5.2 Corporate
 - 5.3 Government
6. Bonds
 - 6.1 Government of Canada treasury bills
 - 6.2 Other Government of Canada direct and guaranteed bonds
 - 6.3 Provincial government direct and guaranteed bonds
 - 6.4 Municipal government direct and guaranteed bonds
 - 6.5 Finance company and other short-term commercial paper
 - 6.6 Other Canadian bonds
7. Mortgages
8. Stocks
9. Foreign investments
10. Life insurance and pensions
11. Other financial transactions, n.e.i.

Comments on several of the categories, the contents of which may not be fully evident from the headings above are included as follows:

Official holdings of gold and foreign exchange include the holdings of the Exchange Fund Account, the Bank of Canada and the Minister of Finance, a definition consistent with that used in the capital account of the Balance of Payments.

Included in **currency and bank deposits** are Canadian dollar deposits with the chartered banks regardless of whether in the form of demand, savings or term deposits or certificates of deposit or deposit receipts. Also included are deposits with the Bank of Canada.

Deposits in other institutions include Canadian dollar deposits with Quebec Savings Banks, credit unions and caisses populaires, trust companies, mortgage loan companies, Post Office Savings Banks, Province of Ontario Savings Offices, and Province of Alberta Treasury Branches. Also classed as deposits, in addition to demand, savings and term deposits, are guaranteed investment certificates, mortgage loan company debentures and other similar instruments.

The category **foreign currency and deposits** includes foreign currency deposits with Canadian chartered banks as well as deposits with deposit-accepting institutions abroad. Excluded are foreign currency holdings and deposits of the monetary authorities which are included in official holdings of gold and foreign exchange.

Consumer credit includes all external sources of funds for financing of consumers' purchases of goods and services. This category has the same coverage as the annual consumer credit series published in the DBS publication *Credit Statistics*.

The category **trade and other receivables** includes all receivables not included elsewhere. Hence, in addition to trade receivables, interest and dividends due and accrued, taxes receivable and other such accounts are placed here.

Other loans include all loans with the exception of loans included in the categories of consumer credit, bank loans, and claims on associated companies.

Claims on associated enterprises is subdivided into three parts: (a) non-corporate claims record the change in the equity of individuals in their unincorporated business operations; (b) corporate claims record all financial transactions, excluding trade, between parent companies and their subsidiaries, regardless of whether they take the form of stocks, bonds, or loans; and (c) government claims include the claims of governments on their enterprises and the claims of government enterprises on their subsidiaries.

The category **life insurance and pensions** is designed to include that part of individual contractual savings which takes the form of equity in insurance and pension contracts.

STATISTICS OF SCIENTIFIC RESEARCH AND DEVELOPMENT IN CANADA

Introduction

The total output of goods and services by an economic unit depends essentially on two elements: the quantity of resources available and the manner in which they are combined. Hence an increase in output depends on an increase in the amount or in the productivity of these resources. Since most economic resources exist in limited quantities, economic growth must depend mainly on improvements in the techniques of combination or transformation.

Such an improvement in productivity is an innovation, which may result from a number of factors, including better management techniques, improved institutional patterns and the discoveries of scientific research and development (R & D). The effects of innovation are reflected in productivity indexes which, by measuring changes in the ratio of output to one or more inputs, provide a rough indication of the effectiveness with which productive resources are being utilized.

Productivity growth depends on several factors, the most significant of which are clearly affected by R & D. For example, improved capital equipment embodies the results of past R & D. Medical research leads to the increased vigour and better health of the labour force. New products derived from R & D will lead to the creation of dynamic new firms and industries replacing those which are less efficient. R & D in methods and devices for exploration and exploitation increase both the quantity and quality of available resources. Furthermore, participation in R & D may tend to promote a "scientific" attitude amongst entrepreneurs, thus favouring managerial and institutional innovations.¹

The Need for R & D Statistics

From the above introduction, we may assume that scientific research and development is an important factor of economic growth, although it is not yet possible to quantify this contribution, or even to agree on its relative importance.² This assumption has caused governments and international organizations to actively encourage science and research. This is true not only for the governments of the industrialized countries, but significantly, also for those of the less developed countries.³ In Canada, not only is the R & D performed by governmental agencies increasing, but grants and tax

incentives are being used to encourage industry and educational institutions to expand their own programmes.

It is evident that accurate statistics are needed to measure the magnitude of the national research and development programmes and to indicate areas requiring special assistance. Such statistics are also necessary for further attempts to define the relationship between R & D and economic growth. The governments of most industrialized countries are now aware of the need for reliable statistics of R & D and are developing the necessary staff and procedures. As countries establish official statistical series for their R & D programmes, it is desirable that these series be comparable with each other. A step in this direction was the publication of a manual by the OECD, *Proposed Standard Practice for Surveys of Research and Development*.

Scientific Research and Development

Scientific research is investigative, experimental and generally original work undertaken primarily for the advancement of scientific knowledge. Two types of research are often distinguished: basic research and applied research. The essential difference between the two activities is usually considered to be the motivation of the research worker. When performing basic research the investigator wishes to increase his knowledge and to improve his understanding of the phenomenon in which he is interested. In applied research, he is seeking knowledge in order to develop or improve a product or process, or to apply the information acquired in some other way. Development is the use of the results of research to create new materials, devices, products, systems and processes, or to improve existing ones.

The term scientific research and development includes all three of these activities. This does not, however, imply that all three will necessarily be meant when the term is used. For example, a project may involve only one or two of these activities, whereas another may require all three consecutively or even simultaneously. In practice, it is extremely difficult to determine when one activity ends and another begins, especially when a project moves through applied research and into development.

Some Problems in Collecting Statistics on R & D

A major problem in this area is the difficulty in arriving at a common definition of R & D. Both of the terms research and development are used for a number of activities which are not considered scientific R & D, for example, market research and resources development. Although definitions may be provided on questionnaires, most respondents will already have their own conceptions which will often influence their interpretation of the questions. There are also a number of related activities which at times may be practically indistinguishable from

¹ C.F. Carter and B.R. Williams. *Industry and Technical Progress, Investment in Innovation and Science in Industry*. London, Oxford University Press, 1957, 1958 and 1965. Phillippe de Woot. *La Fonction d'Entreprise*. Louvain, E. Nauwelaerts, 1962.

² See, for example, the papers of Edward Denison and John Vaizey in a report by the Study Group in the Economics of Education of the OECD, *The Residual Factor and Economic Growth*, Paris, 1964.

³ For example, see papers presented at the U.N. Conference on the Application of Science and Technology for the Benefit of the Less Developed Areas (October 1962-February 1963).

R & D. Such activities include collection of scientific data, processing of scientific information, education and testing. The delimitation between development and production is also difficult to determine.⁴

What is the best measure of R & D? There are two possible procedures: to measure inputs or to measure outputs. Obviously it would be preferable to evaluate scientific R & D in terms of the value of output. Unfortunately, the nature of the results of R & D is such that it is impossible to assign a common unit of measurement. This output may range from the confirmation of hypotheses or the formulation of a scientific law, to a new consumer product or medical treatment. Basically, the output of R & D, or at least of the research element, consists of ideas, for which we have no numerical measure of value. The individual firm or agency may be able to evaluate its own R & D programme, but these evaluations are necessarily subjective and hence cannot be aggregated.

We are left then with only one possibility—the measurement of the inputs of R & D. These inputs include such things as ideas, people, raw materials, supplies, equipment and buildings. Really, of course, all one can say is that so many dollars have been spent on a programme or that a certain number of scientists and engineers are engaged in R & D. It is dangerous to assume that the relative value of the inputs is proportional to the relative value of the R & D performed, although this may be permissible when considering large aggregates.

There are also technical problems in surveys of R & D. One is that individuals cannot be included, so that the efforts of independent inventors are not covered. Another is caused by the nature of the financial accounts kept by most organizations. Normally the accounts of expenditures are kept only for major sub-units and are broken down into different classes of costs based on type of item purchased, rather than purpose of the item. Thus when a sub-unit is not entirely engaged in R & D, estimates are required for the appropriate proportion of expenditures to be allocated to this activity. Similar problems arise even for R & D divisions when information about the type of R & D is desired.

Canadian Statistics on R & D

The first official data on expenditures for research and development in Canada were probably those contained in a joint Dominion Bureau of Statistics—National Research Council report *Survey of Scientific and Industrial Laboratories in Canada*, published in 1941. The survey was undertaken in an effort to ascertain the number and facilities of laboratories available for the Canadian war effort. The report contained 1938 expenditures and manpower of the major Canadian laboratories, as well as a directory of these laboratories. Data were shown by laboratory functions, one of which was research.

⁴ Discussions of the problem may be found in the OECD manual, pp 12-20, or in *Methodology of Statistics on Research and Development*, Washington, National Science Foundation, 1959, pp 25-27 and 40-44.

In 1947 the Department of Reconstruction and Supply released a study, *Research and Scientific Activity Canadian Federal Expenditures 1938-1946*. Besides valuable statistical material, this study also contains an interesting section on the concept, economic significance and measurement of research.

In 1956 the Dominion Bureau of Statistics undertook the first of its biennial surveys of R & D by Canadian industry. The survey is continually being improved through the use of more detailed questionnaires, larger mailing lists and improved external data. At present information is collected on both intra-mural and extra-mural current R & D expenditures, capital expenditures, sources of funds, organizations performing R & D for the respondent, payments and receipts for patents, licences and technical "know-how", product field and scientific discipline covered by the R & D as well as on the personnel engaged in R & D. Results are published in the series *Industrial Research and Development Expenditures in Canada*.

The survey of industrial R & D has been complemented by a similar survey of the Federal Government's scientific activities begun in 1959. Besides data on R & D, statistics are collected on other scientific activities such as scientific data collection, scientific information and scholarships. The results of this survey are published in *Federal Government Expenditures on Scientific Activities*.

In 1961 the President of the NRC, Dr. E.W.R. Steacie, devoted the major portion of his annual report⁵ to a discussion of some of the universal aspects of research and development and included estimates of total Canadian R & D for the years 1956 to 1959. The Royal Commission on Government Organization also published estimates of the expenditures and personnel of the Federal Government in scientific activities.⁶ These data cover the period 1951-52 to 1961-62.

Total R & D Expenditures in Canada

In response to the "International Statistical Year for Research and Development" of the OECD, the Business Finance Division of the Bureau of Statistics prepared estimates of total R & D expenditures in Canada in 1963. This is the first time the DBS has attempted to compile the expenditures of sectors other than Canadian industry and the Federal Government. Since only part of this field is covered by direct survey, much of the data presented have been estimated. It is emphasized, therefore, that these matrices, although believed to approximate the real situation of Canadian R & D in 1963, are estimates only. Scientific research and development in the social and psychological sciences are not included, nor are R & D in the humanities and fine arts. It is hoped that eventually surveys can be expanded to cover these areas.

⁶ Royal Commission on Government Organization. Report No. 23: *Scientific Research and Development*, Ottawa, the Queen's Printer, 1963, Appendices 1-14.

TABLE 1. Total Current and Capital Expenditures on Scientific R & D in Canada, 1963

Sector providing funds	Sector of performance				
	Business enterprises	General government	Private non-profit	Higher education	Total
	millions of dollars				
Business enterprises	154.0	1.1	0.2	1.1	156.4
General government	28.2	198.2	2.4	21.4	250.2
Private non-profit	—	—	4.0	2.7	6.7
Higher education	—	—	0.3	34.0	34.3
Abroad	7.4	0.1	0.2	4.1	11.8
Totals¹	189.7	199.4	7.2	63.3	459.6

¹ Totals may not add exactly because of rounding.

TABLE 2. Total Current Expenditures on Scientific R & D in Canada, 1963

Sector providing funds	Sector of performance				
	Business enterprises	General government	Private non-profit	Higher education	Total
	millions of dollars				
Business enterprises	124.5	1.1	0.2	1.1	126.9
General government	28.2	164.7	2.3	18.2	213.4
Private non-profit	—	—	3.5	1.5	5.0
Higher education	—	—	0.2	23.6	23.8
Abroad	7.4	0.1	0.2	4.1	11.8
Totals¹	160.2	165.9	6.4	48.5	381.0

¹ Totals may not add exactly because of rounding.

The \$460 million spent on R & D in Canada in 1963 represent slightly over 1 per cent of the Gross National Product for that year, or about \$24 for every person living in Canada. Approximately 54 per cent of the funds were provided by Canadian governments and 34 per cent by industry, however, many of the governments' expenditures were for R & D performed by others. Thus R & D performed by governments accounted for only 43 per cent of total expenditures, whereas industry was responsible for 41 per cent of the total. The government sector also provided about a third of the funds used by colleges and universities for scientific research. Indirectly, the higher education sector received even more government assistance, since most of the general funds used to pay for salaries and equipment came from government grants.

The business enterprises sector comprises all firms operating in Canada, and includes trade associations, industrial research institutes and crown corporations performing a commercial function. Figures for this sector are based on returns received in the DBS survey of 1963 industrial R & D.

The general government sector consists of the Dominion and provincial governments, and the pro-

vincial research councils or foundations. Estimates for the Federal Government are based on returns received in the latest completed DBS survey of scientific activities of the Federal Government. These data have been adjusted to a calendar year base. Estimates for the provincial governments are based on the provincial public accounts and on reports by some recipients of funds. Estimates for the provincial research councils are based on returns made in a pilot survey made by the DBS in the summer of 1964.

The private non-profit sector comprises voluntary health organizations, hospitals, private foundations and non-profit research institutes. Estimates are derived from the pilot survey mentioned above and from information provided by some of the organizations granting funds to these institutions.

The higher education sector is made up of Canadian universities and colleges, but does not include attached hospitals. Estimates are based on studies made by the National Research Council and the Medical Research Council.

LABOUR FORCE (More detail in Table 19)

Employment and total labour force declined somewhat in September while unemployment was unchanged; the unemployment rate was 4.0 per cent.

	total labour force	total employed	employed non-agriculture	unemployed	unemployment rate	not in the labour force
	thousands				per cent	thousands
1965 J	7,056	6,762	6,153	294	4.2	5,960

RETAIL TRADE, NEW MOTOR VEHICLE SALES (More detail in Tables 56 and 85)

Total retail trade increased by 1.8 per cent in August as the gains recorded in some store types more than outweighed the declines in the others.

New motor vehicle sales were generally and appreciably higher in August.

CONSTRUCTION (More detail in Tables 67, 72 and 73)

Total value of building permits was irregularly high in August owing to strong upward movements in both the residential and non-residential sectors.

Housing starts picked up considerably in September following the decreases of the last three months while completions fell off from recent high levels; housing under construction also picked up in the period after a five-month decline.

¹Gross National Product at market prices excluding accrued net income of farm operators from farm production. ²Before dividends paid to non-residents; see also footnotes on Table 113. ³Total of all monthly and quarterly series as in column 14, Table 90. ⁴Seasonally adjusted figures for this series do not incorporate revisions to the original data in table 75.

PRICES (More detail in Tables 37, 38, 39, 93, 94 and 114)

The general wholesale index rose marginally in September and was 3.9 per cent above the September 1965 index of 251.1.

The index of thirty industrial materials moved back in September for the fifth month in succession.

The index of industrial common stocks dropped in September from the high levels of preceding months.

The consumer price index moved slightly up in September, attributable to increases in the durable, non-durable and service components offset for the most part by a 0.7% decrease in the food group.

¹The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. ²Includes logging, fishing, trapping and hunting. ³Includes mechanical and construction. ⁴Includes a small number in non-specified occupations. ⁵Does not include students entering Canada on students' visas. ⁶Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force. Source: Quarterly Bulletin, Department of Citizenship and Immigration.

¹Figures for births, marriages and deaths for 1965 and 1966 are provisional and represent registrations filed in provincial vital statistics offices during the month under review, regardless of the month of occurrence. Figures for these years are exclusive of the Yukon and the Northwest Territories. Births and deaths are also exclusive of stillbirths. Sources: Vital Statistics (84-001), D. B. S.

¹Includes change in farm inventories. The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for withdrawals of grain from farm stocks and the change in livestock items. Because of arbitrary elements, too precise an interpretation should not be given to the series. ²Includes residual error of estimate. Source at bottom of Table 12.

¹Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. ²The labour force as a percentage of the population 14 years of age and over. ³The unemployed as a percentage of the labour force. ¹See footnote 1, table 19. Labour force obtained as the sum of employed and unemployed from tables 21 and 23. ²Canada totals, obtained by summing the seasonally adjusted data for the five regions, are usually different from the totals given on page S-1. These differences are small and are due to a statistical discrepancy. Source: The Labour Force, (71-001) D.B.S.

¹In calculating time loss, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such as those laid off as a result of a work stoppage is not included. ²The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; the total, however, includes all work stoppages. The agricultural, finance, insurance and real estate and public administration and defence industries are not shown separately; should strikes occur in these industries, they also will be shown in the total. ³Includes miscellaneous manufacturing industries. ⁴Includes also publishing and allied industries. ⁵Includes also the storage and communication industries.

Source: Labour Gazette, Department of Labour.

Table 28: employment indexes,¹ by industrial divisions (1961=100) based on the 1960 standard industrial classification

monthly averages	industrial composite ²	forestry	mining, including milling	manufacturing				transportation, communication and other utilities ³	trade		finance, insurance and real estate	service ⁴

¹The data in Tables 28 to 35 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. ²Excludes agriculture, fishing, trapping and public administration and defence. ³Includes storage, electric power, gas and water utilities. ⁴Excludes domestic service. Source: Employment, Average Weekly Wages and Salaries, (72-002), D.B.S.

¹Monthly shipments represent an estimated projection of the latest available census of manufacturer's values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D.B.S.

Table 41: manufacturing inventories¹ by industries as in the revised standard industrial classification (million dollars)

end of year or month	total inven- tories owned	non-durable goods	durable goods	food and beverage	tobacco products	rubber	leather	textile	knitting mills	clothing	wood

¹Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. ²Total manufacturing inventory owned by manufacturers including warehouse stocks. ³Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. ⁴End of period. Annual figures for inventories and unfilled orders are end of December values. Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D. B. S.

¹Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. ²100 cu. ft. of solid wood; pulpwood produced for domestic use and excluding exports. ³Customs exports. ⁴Mill shipments destined for export. Sources: Pulpwood Production (25-001), Trade of Canada, Exports (65-004), D. B. S.; Bulletins of Canadian Pulp and Paper Association and Newsprint Association of Canada.

¹Data on shipments relate to rolling mills products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. ²Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. ³Includes appliances and utensils. Note: Some groupings are not entirely comparable to year 1964 due to change in classifications but in general the differences are minimal. ⁴Excluding shipments for re-processing at maker's own plant. Source: Primary Iron and Steel (41-001), D. B. S.

¹Barrels of 35 Canadian gallons. ²Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. ³Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. ⁴Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. ⁵Includes inventories at end of period being held at gas plants and in storage caverns. ⁶Includes stove oil, kerosene and tractor fuel. ⁷Includes aviation gasoline and aviation turbo fuel. ⁸Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. ⁹Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products.

¹The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. Source: Building Permits (64-001), D.B.S.

¹A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 5,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. ²End of period. Source: New Residential Construction (64-002), D. B. S.

¹Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and Northwest Territories for which only annual statistics are collected. ²Planks and boards, flooring and square timber. ³Hollow blocks including fireproofing and load-bearing tile. ⁴For building insulation only.

⁵Figures cover the production of firms which normally account for 90 per cent of the total for Canada. ⁶Factory sales of firms which normally account for 96% of total Canadian production. Source: Concrete Products (44-002), Products made from Canadian Clays (44-005), Asphalt Roofing (45-001), Rigid Insulating Board (36-002), Iron Castings and Cast Iron Pipes and Fittings (41-004), Steel Wire and Specified Wire Products (41-006), Gypsum Products (44-003), Mineral Wool (44-004), Sales of Paints, Varnishes and Lacquers (46-001) and Trade of Canada, Imports (65-007), Exports (65-004), D.B.S.

Note: Components may not add to totals due to rounding. ¹The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when the current annual totals for all firms are known the following year. ²Excluding trucks. ³The total value of all machines shown in this table is greater than the value shown for farm machinery in Table 87 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. Source: Farm Implement and Equipment Sales (63-009), D.B.S.

¹These indexes are available for January, April and August only. ²Average rates of cash wages paid per month to male hired help on farms. They reflect the average of the wages paid to all male farm help regardless of age and skill. Data are available for January, May and August only. ³Exclusive of Newfoundland. Western grain prices used in the construction of the index prior to August 1, 1965 are final prices. From August 1, 1965 to date, the western grain prices used in the index are initial prices only for wheat, oats and barley. ⁴Barley No. 1 feed; hogs grade "B" alive. ⁵Price of 100 lbs. good steer as a percentage of the price of 100 lbs. live hog, grade B. ⁶Price of 100 lbs. good steer as a percentage of the price of 100 lbs. good lamb. ⁷Quotations refer to steers of all weights. ⁸Grade "B1" hogs. Sources: Price Index Numbers of Commodities and Services Used by Farmers (62-004); Farm Wages in Canada (21-002) Occasional; Coarse Grains Quarterly (22-001), D.B.S. and Livestock and Meat Trade Report, Dept. of Agriculture.

¹Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last three months are not so adjusted.

²Includes stocks held by manufacturers, wholesalers and other warehouses.

³Many mills were operating at more than the standard 26 working days in the month.

⁴Includes solid, coated, bulk, packages and novelties. ⁵Includes beef stews and boiled dinners. ⁶Includes tomato sauce, sauces for meat and fish and sauces, other.

¹Total retail trade obtained by summing "By Kinds of Business". The sum of the seasonally adjusted retail trade by regions will not necessarily add up to this total. ²Includes sales of new and used cars, trucks and buses, repair parts and services, tires and tubes, storage batteries, gasoline, some farm implements and a small amount of wholesale trade.

¹Monthly averages for years 1964 and 1965 differ from the averages of the monthly data due to revisions which cannot be allocated by months. ²Includes scheduled and non-scheduled carriers, groups I to IV. These groups cover all air carriers with gross operating revenues of over \$60,000 annually prior to January, 1964 and over \$100,000 annually since. ³United States and other foreign carriers. Excludes in transit passengers. ⁴Cargo includes air freight and express but excludes mail and excess baggage. ⁵Data prior to 1964 do not include bulk transportation. Because of survey limitations, data after January 1, 1964 refer only to aircraft having a minimum authorized take-off weight on wheels in excess of 18,000 lbs. Source: Civil Aviation (51-001), D. B. S.

¹The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does not include failures, sales or seizures carried out under other legislation. The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ontario, Prairie provinces and British Columbia from the total. ²In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. ¹Excluding revivals, increases, dividend additions, reinsurance acquired, credit insurance and pension bonds without insurance. Value totals are estimates projected from the sales reported by 34 companies operating in Canada representing 82% of new ordinary and 83% of new group contracts. ²The monthly Canada totals for 1964 do not correspond to the sum of the provincial totals as revisions applied to the national total are not yet available for the provinces. Neither the monthly figures for 1964 nor the monthly averages for 1964 have been revised to agree with the Canada total. ³Total new settled-for ordinary sales in Canada.

⁴Under new or amended contracts.

¹The definition of profits before taxes is based mainly on the accounting definition used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by sample of all companies incorporated in Canada (excluding government-owned companies). ²As is evident from the above footnote, the data reporting unit is the company; the data are therefore not entirely comparable with data where the establishment is the reporting unit. ³Includes also the furniture and furnishings industry. ⁴Includes the primary metal, the metal fabricating, the machinery and the transportation equipment industries. ⁵Includes tobacco products, leather and miscellaneous manufacturing industries. ⁶Includes also storage and communication industries. ⁷Includes agriculture, forestry, fishing and construction. Source: Corporation Profits (61-003), D. B. S.

Note: Some of the current statistics in this table are not entirely comparable to the corresponding figures of previous years due to transfers of duties which took place during the current year and which have not been adjusted.

¹This statement does not include any disbursements other than regular budgetary expenditures. Excluded, for example, are all government outlays arising from increases in loans, advances and investments. ²Under the Technical and Vocational Training Assistance Act. ³Government contributions under the Hospital Insurance and Diagnostic Services Act. ⁴Includes treatment and rehabilitation services. Sources: Canada Gazette and Dept. of Finance.

A NOTE TO USERS

MODIFICATION:

The series on total value of landings of seafish (Table 82, col. 1) has been changed and will now include seaweeds and other species such as seals, whales, worms, etc. The data for this series have been adjusted back to reflect this change and hereby ensuring continuity in the record. For the period not covered by the Review, the monthly figures on the new basis can be obtained from the D.B.S. publication "Monthly Review of Canadian Fisheries Statistics", catalogue no. 24-002.

BACK RECORDS:

The following back records, original and seasonally adjusted, are available on request from the Current Business Indicators Section, National Accounts and Balance of Payments Division, D.B.S. These series are in addition to those appearing in the 1965 Annual Supplement to the Review.

(1) The series on Manufacturing Inventories Held broken down into raw materials, goods in process and finished products from 1952 to date as in Table 45.

(2) The series on Building Permits by type, as in Table 67 from 1948 to date namely, industrial, commercial, institutional and government permits.

(3) The series on Labour Force by region, namely, total labour force, total employed, employed non-agriculture, unemployed, unemployment rate and not in the labour force from 1953 to date as in Tables 20, 21, 22, 23, 24 and 25 respectively.

Annual Subscription: \$5.00 — Single copy: 50c.

This review and other publications of the Dominion Bureau of Statistics, including a free annotated catalogue of current publications, may be ordered from the Information and Public Relations Division, Dominion Bureau of Statistics, Ottawa, Ontario, and remittances made payable to the Receiver General of Canada.

2204-501

INDUSTRY PRODUCTIVITY MEASUREMENT IN CANADA

I. Introduction

The April 1965 issue of the Review featured an article describing the concepts, methodology and principal findings of a newly published reference paper dealing with the measurement of productivity change at aggregate levels of economic activity in Canada.¹ Since that time, the measures have been updated annually and their coverage extended to include agriculture.² There will also be released very shortly the first in a series of annual publications which will document the progressive conceptual and statistical refinement of the measures and analyze some of the factors contributing to the overall changes as well as providing comparisons with corresponding U.S. series published by the Bureau of Labor Statistics of the Department of Labor.³

As the earlier article indicated, the development of productivity measures at the individual industry level has been proceeding concurrently with the aggregate measures programme, and the first results of this work, comprising studies of the synthetic textiles, breweries and pulp and paper industries, were released recently.⁴ These industries, together with others for which productivity studies are presently in progress, such as iron and steel, hosiery, sugar refineries and cement, were chosen so as to provide a cross-section of manufacturing in which import-competing, export and purely domestic industries would be represented. A further criterion was that there should exist comparable productivity measures for another country.

Since there are approximately 140 individual industries in manufacturing at the 3-digit level of the 1960 Standard Industrial Classification, it will be clear that, with the somewhat limited resources that can be devoted to it, this particular programme cannot progress as rapidly as some users might hope. In any case, there may be some limitation on the number of industries that can ultimately be covered since, at fine levels of detail, the criteria for publishability of productivity data are considerably more exacting than at higher levels of aggregation where there is a tendency for errors in measurement to cancel out and where the rough edges of conceptual inconsistencies can be

smoothed over more easily.⁵ Consideration is therefore being given to the preparation of less refined measures at the major group level in recognition of the urgent requirement for additional detail within manufacturing. Again, there is a need to extend the individual industry measures programme into the nonmanufacturing industries, and it is hoped that some commitment of resources can be made in this area in the reasonably near future.

Productivity measures at the individual industry and major group level of detail are a logical extension of those which describe changes taking place at the level of the total commercial economy and its major sectors. Since modern techniques of numerical analysis can readily accommodate a great number of variables, the availability of detailed output, labour input and productivity data by industry can significantly improve the efficacy of analytical and predictive exercises for major sectors of the economy such as manufacturing. Direct comparisons between individual industries or groups of industries of productivity data and various related measures of performance can also shed light on the structural and operating characteristics of Canadian industry and its international competitiveness. For any particular industry, provided that it is defined in a reasonably homogeneous manner, productivity data for the industry as a whole and for particular groupings of component establishments by size, geographical location, 4-digit subclassification etc., where these can be made available, provide valuable standards of reference against which individual establishments can compare their own performance. The initiation of this series of detailed productivity reports therefore seems particularly timely in view of the attention currently being given to the fostering of secondary manufacturing in Canada.

II. General Concepts and Methods of Measurement

Productivity is a broad concept which seeks to express the relationship between output and the various resources used in its production, and there can thus be considerable diversity of approach in its measurement. In practice, because of data limitations and the need for a simple and broadly acceptable method of measurement, most national statistical offices and international organizations have concerned themselves almost exclusively with measures of output per unit of labour input. Such measures can, of course, be justified more fundamentally since human beings, whose time and skills provide the "labour input" of the relationship are more than simply productive resources. It is for them, in their capacity as consumers, as well as by them, that the production process is being

¹ Dominion Bureau of Statistics, "Indexes of Output per Person Employed and per Man-hour, Commercial Nonagricultural Industries, Canada, 1947-63", Ottawa, Queen's Printer, 1965, Catalogue No. 14-501.

² See, for example, DBS Daily Bulletin, June 7, 1966.

³ Id., "Indexes of Output per Person Employed and Per Man-hour, Commercial Industries, Canada, 1946-65", Ottawa, Queen's Printer, 1966, Catalogue No. 14-201 (forthcoming).

⁴ Id., "Productivity Trends in Industry, Report No. 1: Synthetic Textile Mills, Breweries, Pulp and Paper Mills, 1947-61", Queen's Printer, Ottawa, 1966, Catalogue No. 14-502.

⁵ In a recent release entitled "Selected Publications on Productivity and Technological Developments as of March 1, 1966", the Bureau of Labor Statistics of the U.S. Department of Labor, which has a great many years of experience in this field, listed 20 manufacturing and 9 non-manufacturing industries for which they published indexes of output per man-hour.

carried on. Thus, increases in output per unit of labour input, reflecting as they do greater efficiency in the utilization of the most basic resource, are at the same time the ultimate source for improvements in the standard of living. It should, of course, be stressed that the use of labour input as the denominator in a productivity ratio does not imply that changes in the ratio can be attributed directly and solely to labour. These reflect, not only changes in the skills and effort of the labour force, but also the contribution of the other productive factors employed—capital and natural resources, as well as the effectiveness with which they are all combined and organized for production.

Since most productivity measures are time series of output per unit of labour input in index number form, they are essentially measures of productivity **change** and, as such, shed no light on the absolute levels of productivity underlying the changes. The measurement of absolute productivity is a field which has not so far been extensively developed, although there are obvious applications in the area of interindustry comparisons and inter-regional comparisons for particular industries or groups of industries. Measures such as current dollar census value added per employee or per man-hour can be calculated for individual manufacturing industries in Canada and for various geographical and industry groupings from the data of the annual Census of Manufactures, but international comparisons are much more difficult. Very few countries have production censuses or surveys comparable in detail and periodicity with those of Canada, and the problem is further compounded by the difficulties of converting different national currencies in such a way as to properly reflect their relative purchasing power. Such international comparisons as have been made, then, for the purposes of the Bureau's productivity studies are simply expressions of relative change from the respective bases in Canada and the United States.

The general concepts of output and labour input at the individual industry level do not differ essentially from those used at the aggregate level. Gross domestic product at factor cost is, in practice, approximated by "census value added", or net output as it is frequently called, which, in real terms, is calculated by subtracting from the constant dollar gross output of the industry in question a measure of certain intermediate inputs (materials, fuel etc.), also in constant dollar terms. The constant dollar measures can, in theory, be derived by either of two approaches. In the first place, quantities of the various products and intermediate inputs of each year can be weighted by the average unit values prevailing in the base year. Thus, a so-called "double deflation" index of real net output may be formulated algebraically as follows:

$$I = \frac{\sum Q_i P_o - \sum q_i p_o}{\sum Q_o P_o - \sum q_o p_o}$$

where P and Q are the average unit values and quantities of products, p and q the average unit values and quantities of intermediate inputs, and the subscripts o and i indicate the base-year and given-year values respectively.

Alternatively, the same result can be derived by deflating current dollar values of output and intermediate input with currently weighted price indexes as follows:

$$I = \frac{\frac{\sum P_i Q_i}{(\sum P_i Q_i) - (\sum p_i q_i)}}{\frac{(\sum P_o Q_i')}{(\sum P_o Q_i') - (\sum p_o q_i)}} \cdot \frac{\sum P_o Q_o - \sum p_o q_o}{\sum P_o Q_o - \sum p_o q_o}$$

In practice, this identity of results is rarely achieved because of the fact that most available price indexes are base-weighted and, for a given industry, there are different levels of commodity detail and different pricing and valuation boundaries as between the price and production statistics. For the three manufacturing industries reported on in this article, real net output measures were calculated entirely by the use of the average unit value deflation approach. As the publication explains, appropriate price indexes were not available for all elements of the calculation or for the whole of the period in question. However, recent and anticipated progress in the development of industry-oriented price indexes, as well as the increasing difficulties of the average unit value deflation approach arising from the implementation of the new establishment concept in the Census of Manufacturers,⁶ suggest that price deflation will be much more extensively used in the future.

The basic concept of labour input utilized in the individual industry productivity measures is that of the man-years or man-hours of all persons engaged in the production of output. Man-hours data can relate either to hours worked or hours paid. From the standpoint of expressing a purely physical relationship between output and labour time, hours worked are probably more useful, while hours paid emphasize the economic aspect of the relationship. For reasons mentioned in Part III, man-hours paid data have been used in the individual industry productivity studies so far. Separate measures of both employment and man-hours were calculated for production and related workers and all persons employed respectively—a traditional distinction in labour statistics, altogether one which may be losing its force in the present climate of rapid and pervasive technological change. All the measures are simple aggregates of labour time and thus do not give any weight to differences in the quality of labour inputs which may exist within an industry at a given point of time or changes in quality which may occur over a period of time.

⁶ See Part IV for the details of this change. The principal difficulty in connection with average unit value deflation results from the fact that, if the basis of valuation of an establishment's production changes due to some change in its marketing procedures, the average unit values of the base year may no longer reflect the relative importance of the individual products. Furthermore, average unit value deflation techniques cannot be applied to nonmanufacturing output (since product detail is usually lacking).

The availability of different measures of output and labour input for a given industry — gross and net output, and the employment or man-hours of either production workers or all employees — thus permits a variety of productivity measures to be calculated. It has been the object in the studies reported on to explore all useful and practicable relationships between output and input rather than to confine them within a rigid conceptual framework.

III. Data Sources for Individual Industry Productivity Measures

The primary data source for the measures of real output for individual manufacturing industries is the annual Census of Manufactures. As noted above, the concept of gross domestic product, whether in current or constant dollars, must be approximated by "census value added" since information on certain purchased services is not collected by the Census. However, for the three industries in question, it has provided sufficient product detail, both for output and intermediate inputs, to permit the average unit value deflation approach to be used with a reasonable degree of confidence for the period 1947 to 1961. Reference has already been made, however, to the difficulties which may arise in implementing this approach now that the scope of the Census of Manufactures has been extended to the total activity of reporting establishments with the valuation of shipments on an "f.o.b. establishment" basis, thereby opening up the possibility of changes in the level of valuation as establishments vary their marketing arrangements. Under these circumstances, the deflation of current shipment values by specified price indexes seems to offer more promising possibilities for the future than average unit value deflation, because changes in the valuation boundaries of shipments can be matched by corresponding changes in the pricing boundaries and also because this approach is almost certainly a better solution for the deflation of nonmanufacturing output.

In this connection then, a brief review of progress to date at D.B.S. in the development of wholesale price indexes by industry may be appropriate.⁷ The indexes so far published cover the selling prices "f.o.b. plant" of approximately 100 manufacturing industries at the three digit level or below, as defined in the 1948 Standard Industrial Classification. They are available from 1956 to date on a monthly basis with a 1956 reference base and a 1953 weight base. In terms of coverage, they account for about 70% of Gross Domestic Product originating in manufacturing in 1953, notable omissions being the entire printing, publishing and allied industries major group, a number of transportation equipment industries such as shipbuilding, railway rolling stock and aircraft and parts, as well as some elements of clothing and iron and steel products. The problems which have been encountered in the construction of selling price indexes for these industries are, of course, precisely those

which have made it impossible to calculate real gross output by the average unit value deflation approach.

An obstacle in the past to the full use of the price deflation approach for real output measurement has been the lack of a corresponding set of intermediate input price indexes by industry. In recent years, however, substantial progress has been made in the construction of input price indexes in manufacturing, where more than 80 such indexes have already been calculated on an experimental basis, covering industries which account for about 45% of G.D.P. originating in manufacturing in 1953. One of the principal problems in this area is that of discontinuity in the collection of price quotations, since buyers covered by the sample do not necessarily make purchases in every monthly period for which data are required. This has been partially solved by adapting for use on the input side some of the available output prices, although the supplementary information on transportation charges, taxes, etc., needed to convert these prices to a laid down basis at the point of delivery, are frequently difficult to obtain.

The industry selling price indexes will, in the fairly near future, be revised to a 1961 weight and reference base and will also endeavour to reflect the new establishment concept by the adjustment of pricing boundaries to the corresponding valuation practices and by extension to cover nonmanufacturing output when possible. The revised indexes may be initially released for a somewhat smaller number of industries than was the case with the previous indexes, but it is intended to extend their coverage as rapidly as resources permit.

Wholesale price indexes by industry have to serve a broad array of other uses and it is not reasonable to expect that the needs of price deflation can be given primary attention. A number of minor conceptual inconsistencies between the published industry selling price indexes and the value data of the Census of Manufacturers exist, in addition to those mentioned above, which space does not permit to be discussed here. Careful study has, however, indicated that these problems are generally amenable to testing for their incidence and importance in particular industries and that they can be dealt with by adjustments and re-compilations of the basic pricing data.

In the matter of labour inputs, the Census of Manufactures again constitutes the major source of data for individual industry productivity measurement purposes. Up to 1960, when the scope of the Census was still restricted to manufacturing activity, primary attention was focussed on the distinction between "production and related workers" and "administrative and office employees",⁸ in spite of the fact that the latter would almost invariably be engaged in some nonmanufacturing activities.

⁷ See also Dominion Bureau of Statistics, "Industry Selling Price Indexes, 1956-59", Catalogue No. 62-515, Ottawa, Queen's Printer, 1961.

⁸ "Working owners and partners", where applicable, were always grouped with this category.

Measures of annual average employment or man-years for these two categories were available back to 1947 for the synthetic textiles, breweries and pulp and paper studies quite readily, but corresponding man-hours data proved more difficult to assemble. Man-hours of production and related workers in manufacturing, both paid and worked, have been collected by the Census of Manufactures only since 1956 and those for administrative and office employees not at all between 1947 and 1961. To fill these gaps, two alternative methods of estimation were available. The first of these was the "pay deflation" method, by which annual Census aggregates of the wages and salaries of production and related workers and administrative and office employees respectively could be divided by average hourly earnings data for the corresponding categories and industries of the Bureau's establishment-based surveys of employment and related data.⁹ Alternatively, man-hours could be estimated by the "employment inflation" method, in which the Census employment data referred to above would be multiplied by measures of total hours per annum from the same source. Incidentally, since the surveys in question are based on a concept of hours paid and average hourly earnings of all hours paid for, both these procedures lead to estimates of total man-hours paid. Since supplementary information with which to adjust them to a man-hours worked concept was lacking, it was felt desirable to adopt the man-hours paid alternative from the reported man-hours of production and related workers from 1956 on.

Pay deflation appears, on the face of things, to be the more suitable of these two methods because of the greater confidence that can be reposed in the payroll data, which derive from accounting records, as against the employment data which, in the case of production and related workers, are based on monthly sample periods or, in the case of administrative and office employees, on direct annual estimates. However, this premise was not accepted without careful investigation and testing of both methods—for instance, by comparison with reported man-hours in the post-1956 period, and, in some instances, the employment inflation method was found to be more suitable.

Since 1961, as a consequence of the changes in the Census of Manufactures previously discussed, manufacturing operations are no longer identified as a separate area of employment in recognition of the fact that administrative and office employees cannot be properly allocated between manufacturing and nonmanufacturing activities. The Census still continues to distinguish production and related workers engaged in manufacturing activities, so that these can, with some reservations, be related

to corresponding measures of real output,¹⁰ but the only other feasible comparison will be between total real output from all activities and all-embracing measures of the total employment or man-hours of, not only the categories previously mentioned, but also sales and distribution workers, employees in new construction, and other residual categories. In this connection, it may be noted that the 1966 Census will extend considerably the scope of its man-hours questions.

IV. Format of the Individual Industry Reports

The remarks which follow are based on the experience which has been gained so far in productivity studies of individual manufacturing industries, particularly as expressed in the first published report referred to at the beginning of this article. In addition, they reflect current views as to the nature of the periodic updatings which will be made from time to time. The future development of these reports should, of course, also take into account the changing needs of users, and it is hoped that comments will be forthcoming which will enable these to be properly evaluated. It is presently impossible to assess what changes in the format of the individual industry productivity reports will be required when they are extended to nonmanufacturing industries. This is likely to depend on the nature and quality of available data which vary greatly from one industry to another.

The first published productivity report for manufacturing industries comprises three self-contained parts for each of the component industries, namely Synthetic Textile Mills, Breweries and Pulp and Paper Mills, together with additional material common to all three. Each of the parts devoted to a specific industry commences with a section entitled "Trends and Fluctuations in Output per Unit of Labour Input", in which the material of the second section, "Statistical Tables and Charts", is used to summarize the main findings for that industry. The data provided in the tables and charts are described and analyzed mainly in terms of the long-term trends of the various productivity measures and their component output and input detail, as well as the significant year-to-year changes which may have occurred. Annual data are, of course, an imperfect instrument for the measurement of cyclical change, but this has shown up quite markedly in a number of instances. Within the scope of this article, it is not possible to summarize these findings which are extensive, complex and varied. However, for the purpose of illustrating the range within which they can fluctuate, data for the key measures of real net output per person employed and per man-hour of persons employed in each of the three industries, together with those for manufacturing as a whole in the case of the first measure, are shown in the following table.

⁹ See Dominion Bureau of Statistics, "Review of Man-hours and Hourly Earnings", Catalogue No. 72-202, and "Earnings and Hours of Work in Manufacturing," Catalogue No. 72-204, Queen's Printer, Ottawa (Annual).

¹⁰ While the gross output of manufacturing activities can be identified fairly uniquely, it is less reasonable to expect that all intermediate inputs can be properly allocated by respondents.

Real Net Output per Person Employed and per Man-hour of Persons Employed, Synthetic Textile Mills, Breweries, Pulp and Paper Mills and Manufacturing, Canada, 1947 - 61

(1949 = 100)

Year	Real net output per person employed				Real net output per man-hour of persons employed ¹		
	Synthetic textile mills	Breweries	Pulp and paper mills	Manufacturing	Synthetic textile mills	Breweries	Pulp and paper mills
1947	88.2	90.9	92.4	96.9	85.9	89.5	90.1

1961	243.3	179.9	122.4	150.5	254.2	200.4	140.1
1961 as per cent of 1947	275.9	197.9	132.5	155.3	295.9	223.9	155.5
Annual trend rate of change (%) ²	+ 7.3	+ 4.8	+ 1.4	+ 3.3	+ 7.9	+ 5.8	+ 2.9

¹ Manufacturing was excluded from this comparison because, in accordance with the concepts used in the aggregate productivity measures programme, its man-hour productivity data are based on man-hours **worked**, as opposed to the man-hours **paid** concept of the individual industry measures. For the latest official data on manufacturing man-hour productivity, see the DBS Daily Bulletin of June 7, 1966.

² Calculated by the least squares of logarithms method.

The third main section for each individual industry is entitled "General Description and Characteristics of the Industry", and covers such points as its definition and main activities, pattern of growth during the period in question, size structure and location of establishments, characteristics of the industry's labour force, etc. Much of the information is already available in other DBS publications, but its usefulness is considerably enhanced by drawing it together in this particular context.

The fourth part of the report is entitled "General Technical Notes" and, under the sub-headings of "Basic Concepts and Methods" and "Sources and Measures", it elaborates the points which were briefly touched upon in the preceding sections of this article. It also deals with a number of special problems which stem from the use of the Census of Manufactures as the primary source of data and which are worth commenting on briefly here. As is fairly generally known by now, 1960 and 1961 were transitional years for the Census of Manufactures which saw the gradual implementation of a new Standard Industrial Classification and, with it, a new definition of the establishment which also had, as its corollary, certain changes in reporting procedures. Without going at length into these changes,

which have been extensively described elsewhere,¹¹ it may be noted that there has been a shift in emphasis from the purely manufacturing activities of reporting establishments to a wider concept of all operational activities of establishments engaged primarily in manufacturing. A major consequence of this change was that respondents, who were formerly instructed to value of their shipments "f.o.b. plant", i.e. at a level corresponding to a boundary of the establishment defined in terms of manufacturing activity only, are now required to value them "f.o.b. establishment".

These changes in the basic data, together with the reweighting to a 1961 base of the real output measures which derive from them, can be extremely important from the standpoint of comparability and consistency over time of individual industry productivity measures and, in a few instances, the problem is aggravated because of major changes in the definition of the industry which accompanied the implementation of the new concept. It is one of the purposes of the fifth part of the

¹¹ See, for example, the article "Forthcoming Changes in the Census of Industry", Canadian Statistical Review, July 1961.

report, "Industry Technical Notes", to discuss the impact and significance of these changes on particular industries, as well as to comment on any particular difficulties which were encountered in the implementation of the basic concepts of output and inputs and the techniques used to resolve them.

The data presented in the first published productivity report for the period 1947 to 1961 are referred to as being on the "old basis", i.e. using the 1948 Standard Industrial Classification, 1949 output weights and a concept of manufacturing activity only. From both necessity and choice, data for subsequent updatings will be compiled on the "new basis", i.e. using the 1960 Standard Industrial Classification, 1961 output weights and the broader concept of total activity. Already, in the published report, separate data for the period 1959 to 1961 are shown which are based on the new

S.I.C. and the revised output weights, but which are still confined to manufacturing activity only because relevant data for the extension of the Census to a total activity concept were not collected prior to 1961. It is hoped that this particular series can be extended back to 1957 so as to provide a greater number of observations for analytical purposes. It can then be linked in 1961 to one which carries the measures forward on a total activity basis. A more detailed account of these changes as they affect real output measurement, and the steps by which they are being implemented, is provided in a DBS publication describing recent revisions to the monthly Index of Industrial Production.¹²

INDUSTRIAL PRODUCTION (More detail in Table 16)

The index of industrial production advanced by 0.6 per cent in September as the increases in manufacturing and electric power and gas utilities were partially offset by a 1.7 per cent decline in mining.

		total industrial production (1949=100)	manufacturing (1949=100)			(1949=100)

EMPLOYMENT, SELECTED INDUSTRIES (More detail in Table 28)

Employment in total manufacturing fell by 0.4 per cent in July as a slight increase in durables was more than offset by a decline in non-durables. The large drop in mining (9.2%) was mainly due to an industrial dispute in the nickel-copper component.

manufacturing (1961=100)				1961=100

INCOME, EARNINGS AND HOURS (More detail in Tables 18, 34 and 35)

Total labour income rose further in July.

Average hourly earnings continued to be higher in July in both the durable and non-durable components of manufacturing.

Average weekly hours in durable manufacturing picked up in July, reversing a four-month decline.

		total labour income	wages and salaries in manufacturing	average hourly earnings in manufacturing			average weekly hours in manufacturing ¹

¹Gross National Product at market prices excluding accrued net income of farm operators from farm production. ²Before dividends paid to non-residents; see also footnotes on Table 113. ³Total of all monthly and quarterly series as in column 14, Table 90. ⁴Seasonally adjusted figures for this series do not incorporate revisions to the original data in table 75.

PRICES (More detail in Tables 37, 38, 39, 93, 94 and 114)

The general wholesale price index was virtually unchanged in October.

The index of thirty industrial materials recorded its six consecutive month of decline in October.

The index of industrial common stocks dropped in October for the fourth straight month.

The consumer price index edged up 0.1 per cent to 145.3 in October with the increases in durables, non-durables and services outweighing the one per cent decrease in the food index.

¹The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. ²Includes logging, fishing, trapping and hunting. ³Includes mechanical and construction. ⁴Includes a small number in non-specified occupations. ⁵Does not include students entering Canada on students' visas. ⁶Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force.

¹Includes change in farm inventories. The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for withdrawals of grain from farm stocks and the change in livestock items. Because of arbitrary elements, too precise an interpretation should not be given to the series. ²Includes residual error of estimate. Source at bottom of Table 12.

¹Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. ²The labour force as a percentage of the population 14 years of age and over. ³The unemployed as a percentage of the labour force. ¹See footnote 1, table 19. Labour force obtained as the sum of employed and unemployed from tables 21 and 23. ²Canada totals, obtained by summing the seasonally adjusted data for the five regions, are usually different from the totals given on page S-1. These differences are small and are due to a statistical discrepancy. Source: The Labour Force, (71-001) D.B.S.

¹In calculating time loss, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such as those laid off as a result of a work stoppage is not included. ²The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; the total, however, includes all work stoppages. The agricultural, finance, insurance and real estate and public administration and defence industries are not shown separately; should strikes occur in these industries, they also will be shown in the total. ³Includes miscellaneous manufacturing industries. ⁴Includes also publishing and allied industries. ⁵Includes also the storage and communication industries.

¹The data in Tables 28 to 35 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. ²Excludes agriculture, fishing, trapping and public administration and defence. ³Includes storage, electric power, gas and water utilities. ⁴Excludes domestic service. Source: Employment, Average Weekly Wages and Salaries, (72-002), D.B.S.

¹Monthly shipments represent an estimated projection of the latest available census of manufacturer's values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D.B.S.

¹Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. ²Total manufacturing inventory owned by manufacturers including warehouse stocks. ³Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. ⁴End of period. Annual figures for inventories and unfilled orders are end of December values. Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D. B. S.

¹Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. ²100 cu. ft. of solid wood; pulpwood produced for domestic use and excluding exports. ³Customs exports. ⁴Mill shipments destined for export. Sources: Pulpwood Production (25-001), Trade of Canada, Exports (65-004), D. B. S.; Bulletins of Canadian Pulp and Paper Association and Newsprint Association of Canada.

¹Data on shipments relate to rolling mills products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. ²Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. ³Includes appliances and utensils. Note: Some groupings are not entirely comparable to year 1964 due to change in classifications but in general the differences are minimal. ⁴Excluding shipments for re-processing at maker's own plant. Source: Primary Iron and Steel (41-001), D. B. S.

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision. ¹Includes crude oil, condensate and pentanes plus. ²Deliveries to refineries and exports do not add to total new supply due to losses, other uses and inventory changes. ³Gross new production by field and processing plants less field flared and waste, Canadian sources only. ⁴By gas utilities, Canadian sources only. Sources: Crude Petroleum and Natural Gas Production (26-006) and Gas Utilities (55-002), D. B. S.

¹Barrels of 35 Canadian gallons. ²Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. ³Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. ⁴Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. ⁵Includes inventories at end of period being held at gas plants and in storage caverns. ⁶Includes stove oil, kerosene and tractor fuel. ⁷Includes aviation gasoline and aviation turbo fuel. ⁸Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. ⁹Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products.

Note: Components may not add to totals due to rounding differences. ¹The data are collected for 1,400 municipalities and individual figures are available on request. Historical data back to 1920 are available in "Historical Monthly Statistics" Catalogue No. 11-503, occasional. Starting with January 1966, the number of municipalities has been reduced to 56 following the annexation of the town of Riverside to the city of Windsor. Source: Building Permits (64-001), D.B.S.

¹The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. Source: Building Permits (64-001), D.B.S.

¹A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 5,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. ²End of period. Source: New Residential Construction (64-002), D. B. S.

Note: Components may not add to totals due to rounding. ¹The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when the current annual totals for all firms are known the following year. ²Excluding trucks. ³The total value of all machines shown in this table is greater than the value shown for farm machinery in Table 87 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. Source: Farm Implement and Equipment Sales (63-009), D.B.S.

¹These indexes are available for January, April and August only. ²Average rates of cash wages paid per month to male hired help on farms. They reflect the average of the wages paid to all male farm help regardless of age and skill. Data are available for January, May and August only. ³Exclusive of Newfoundland. Western grain prices used in the construction of the Index prior to August 1, 1965 are final prices. From August 1, 1965 to date, the western grain prices used in the Index are initial prices only for wheat, oats and barley. ⁴Barley No. 1 feed; hogs grade "B" alive. ⁵Price of 100 lbs. good steer as a percentage of the price of 100 lbs. live hog, grade B. ⁶Price of 100 lbs. good steer as a percentage of the price of 100 lbs. good lamb. ⁷Quotations refer to steers of all weights. ⁸Grade "B1" hogs.

¹Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada.

Data shown for the last three months are not so adjusted.

²Includes stocks held by manufacturers, wholesalers and other warehouses.³Many mills were operating at more than the standard 26 working days in the month.⁴Includes solid, coated, bulk, packages and novelties. ⁵Includes beef stews and boiled dinners. ⁶Includes tomato sauce, sauces for meat and fish and sauces, other.

¹Total retail trade obtained by summing "By Kinds of Business". The sum of the seasonally adjusted retail trade by regions will not necessarily add up to this total. ²Includes sales of new and used cars, trucks and buses, repair parts and services, tires and tubes, storage batteries, gasoline, some farm implements and a small amount of wholesale trade. Source: Retail Trade (63-005), D. B. S.

¹Monthly averages for years 1964 and 1965 differ from the averages of the monthly data due to revisions which cannot be allocated by months. ²Includes scheduled and non-scheduled carriers, groups I to IV. These groups cover all air carriers with gross operating revenues of over \$60,000 annually prior to January, 1964 and over \$100,000 annually since. ³United States and other foreign carriers. Excludes in transit passengers. ⁴Cargo includes air freight and express but excludes mail and excess baggage. ⁵Data prior to 1964 do not include bulk transportation. Because of survey limitations, data after January 1, 1964 refer only to aircraft having a minimum authorized take-off weight on wheels in excess of 18,000 lbs. Source: Civil Aviation (51-001), D. B. S.

¹The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does not include failures, sales or seizures carried out under other legislation. The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ontario, Prairie provinces and British Columbia from the total. ²In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. ¹Excluding revivals, increases, dividend additions, reinsurance acquired, credit insurance and pension bonds without insurance. Value totals are estimates projected from the sales reported by 34 companies operating in Canada representing 82% of new ordinary and 83% of new group contracts. ²The monthly Canada totals for 1964 do not correspond to the sum of the provincial totals as revisions applied to the national total are not yet available for the provinces. Neither the monthly figures for 1964 nor the monthly averages for 1964 have been revised to agree with the Canada total. ³Total new settled-for ordinary sales in Canada.

⁴Under new or amended contracts.

¹The definition of profits before taxes is based mainly on the accounting definition used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by sample of all companies incorporated in Canada (excluding government-owned companies). ²As is evident from the above footnote, the data reporting unit is the company; the data are therefore not entirely comparable with data where the establishment is the reporting unit. ³Includes also the furniture and furnishings industry. ⁴Includes the primary metal, the metal fabricating, the machinery and the transportation equipment industries. ⁵Includes tobacco products, leather and miscellaneous manufacturing industries. ⁶Includes also storage and communication industries. ⁷Includes agriculture, forestry, fishing and construction. Source: Corporation Profits (61-003), D. B. S.
